Amateur Photographer For everyone who loves photography

IT MIGHT seem strange for a photographer to want to stop light when his craft relies on an abundant supply of it, but just as a baker might not use the whole sack of flour and the artist not use the whole tube of paint, sometimes what we want to create requires less light rather than more. As anyone who has tried to mix fill-in flash, a wide aperture and a bright day will know, it can be impossible to find a synchronised shutter speed short enough that will not overexpose the scene. This is usually when wedding photographers come to realise there is such a thing as too much daylight – and when they begin to investigate leaf shutters.

A neutral density filter can't do much for that

situation (see Tim Coleman's ND filter test on page 50), but when we want a long shutter speed on a bright day, or an even longer shutter speed on a dull day, holding back the light is the only thing to do.

Maybe you want to blur a rolling tide, streak moving traffic into multi-coloured spaghetti, clear a street of pedestrians or create enough time to 'paint' at sunset with a torch or a flash. Photography might mean 'drawing with light', but that doesn't mean more is always better.

HOW TO HAVE YOUR PICTURES PUBLISHED IN READER SPOTLIGHT Send in a selection of up to ten images. They can be either a selection of different images or all have the same theme. Digital files sent on CD should be saved in a Photoshop-compatible format, such as JPEG or TIFF, with a contact sheet and submission form. Visit www.amateurphotographer.co.uk/spotlight for details. We cannot publish images without the necessary technical details. Each RGB image should be a minimum of 2480 pixels along its longest length. Transparencies and prints are also accepted. We recommend that transparencies are sent without glass mounts and posted via Special Delivery. For transparencies, prints or discs to be returned you must include an SAE with sufficient postage.

Sony focuses on SLT, away from DSLR • Alpha 57 boasts 12fps

SONY UNWRAPS NEW SLT SYSTEM CAMERA

SONY has said it is not likely to launch another conventional DSLR as it unveils a new single lens translucent (SLT) camera called the Alpha 57.

Replacing the Alpha 55, the camera's key features include a top burst rate of 12 frames per second with continuous AF (in Tele-zoom Advanced Priority AE mode), and a maximum ISO of 16,000 (lowest ISO 100), extendable up to ISO 25,600.

The 12fps frame rate is achieved using a cropped image, reducing the maximum resolution to 8.4 million pixels.

In an interview with AP, Sony confirmed that it is not likely to launch another DSLR, focusing instead on the translucent mirror technology of its SLTs.

However, Sony category development manager Paul Genge stressed that the firm would continue to compete in this section of the system camera market.

‘We are not pulling out of the DSLR category,’ he said, adding: ‘Given the level of investment Sony is putting into SLT, it is highly unlikely we will ever introduce another DSLR...’

‘We will continue to grow this [SLT] category alongside NEX [CSCs].’

The Alpha 57 is equipped with a new

The Alpha 57's features include a 3in articulated LCD display and Auto Portrait Framing, linked to the rule of thirds

electronic viewfinder, offering a 100% field of view and a resolution of 1.44 million dots.

Due out in April, at a price yet to be announced, the Sony A-mount-compatible Alpha 57 borrows its APS-C-sized, 16.1-million-pixel sensor from the NEX-5N.

Key differences over its Alpha 55 predecessor include Auto Portrait Framing. This aims to position the subject's face in the captured frame in accordance with the rule of thirds, using face detection to first identify where the person is in a scene and then crops the image. It can be used in both landscape

and portrait formats, with the original image saved alongside the altered one.

The Alpha 57 is the first SLT camera to boast Clear Image Zoom, a function designed to double – digitally – the effective magnification of an attached lens.

The camera uses Pixel Super Resolution Technology, borrowed from the firm's Cyber-shot compacts, which deploys ‘pixel mapping’ in a bid to enhance resolution.

The newcomer also incorporates a 15-point AF system – with three cross sensors – and includes full HD movie featuring a maximum 50p frame rate using the AVCHD (version 2) file format.

Sony says the Alpha 57 borrows its design from the Alpha 65, following feedback from European customers who reported that the Alpha 55 was too small, so the Alpha 57 has been given a ‘firmer grip’.

Other features include SteadyShot Inside image stabilisation, claimed to deliver up to 4.5 stops of ‘assistance’, plus Sony's Sweep Panorama technology.

Also on board is a 3in (921,000-dot resolution) articulated LCD screen.

Sony claims it includes an improved version of its object tracking technology.

SNAP SHOTS

● A photographer who retraced the steps of a serial-killing couple, revisiting the scene of the crimes and taking pictures along the way, has been shortlisted in the 2012 Kraszna-Krausz Book Awards 2012. The book, by Christian Patterson, is ‘part evidence and part invention’, say organisers. The results will be announced on 26 April.

● Lensbaby has announced a new macro converters kit, for close-up photos using any Lensbaby optic and body. The £47.99 kit includes an 8mm and 16mm converter that, together, make a 24mm converter. Visit www.intro2020.co.uk.

BRITISH PHOTOGRAPHER WINS HASSELBLAD TITLE

UK PHOTOGRAPHER Paul Graham has won the £95,000 2012 Hasselblad Foundation International Award in Photography.

The judges' citation for this year's awards read: ‘Paul Graham is one of the most brilliant photographers of his generation.’

‘During the course of his nearly 40-year career he has presented an extremely

focused body of work, at once perfectly coherent and never monotonous.

‘In images both sensitive and subtly political, he makes tangible the insignificant traces of “the spirit of the times” we do not normally see...’

An exhibition of Graham's work will open at the Gothenburg Museum of Art in Sweden on 26 October.

AP readers exchange messages in gallery

PHOTOGRAPHERS TIE KNOT IN AP WEBSITE ROMANCE

TWO AP readers have tied the knot, seven years after a chance meeting on the magazine's website.

Tanya Lowe and Ian Gregory first exchanged messages using AP's online gallery, which led to them hooking up in person at the Focus on Imaging show in 2005 and moving in together soon after.

'I blame AP or at least the gallery spin-off, where I happened to post a few pictures and Ian made comments,' wrote Tanya in a recent message posted on AP's website forum.

'So, off I went to look at his website and sign his guest book.'

Tanya told AP's newsdesk she was 'in awe'

of the images Ian had posted to the gallery, having found out he had won honours in the magazine's Amateur Photographer of the Year contest.

'I can't remember exactly what the pictures were that I posted... I was very new to photography and into my garden flowers.'

'Ian, along with a few others, said how much they liked them and gave a few tips on how to improve – I was using a compact at the time. Their encouragement pushed me into photography becoming a hobby.'

The couple, who live in Denville, Hampshire, got married at a register office in Portsmouth on 29 February – leap day.

KODAK DITCHES COLOUR SLIDE FILM

KODAK is set to increase the price of all its films by 15%, just days after confirming plans to ditch all its colour reversal [slide] emulsions.

Eastman Kodak plans to discontinue its Professional Ektachrome E100VS, Ektachrome E100G and Elite Chrome Extra Color 100 slide films, blaming poor demand.

'That, compounded by the complexity of the product manufacturing processes, has made it no longer possible to sustain three slide film products,' added the US-based firm in a statement.

Kodak expects remaining stocks to last from six to nine months, based on current sales, but warns that orders will be fulfilled on a 'first-come, first-served basis'.

'Inventories may run out before then, depending on demand,' added a spokesman.

Kodak's Professional Color Negative and black & white films will continue.

In a further blow to customers, however, Kodak has since revealed plans to raise the price of all remaining films by around 15%.

'We have to contend with further increases in energy and raw material costs, and higher costs associated with lower volumes.'

'Therefore, to remain a sustainable, viable business, the company is implementing a price increase for consumer and professional films.'

Earlier this year, Kodak's US head office filed for bankruptcy protection and revealed plans to cease camera production.

SNAP SHOTS

● Plustek has unveiled new film scanners for 35mm negatives and slides that are designed to use less power than current models. The OpticFilm 8200iAi flagship (priced £439.99) adds features such as support for layers and masks, and 16-bit histogram support. The scanners include a revamped light source, designed to help improve colour rendering while using less power. The basic model, the OpticFilm 8100 costs £219.99. Visit www.intro2020.co.uk.

● Kodak plans to sell its online gallery to photo-sharing and print service Shutterfly for \$23.8m. The deal followed a court-supervised auction process designed to maximise the value of Kodak's assets under UK bankruptcy laws.

● A UK student has been shortlisted in the Student Focus section of the Sony World Photography Awards. Thamyres Matarozzi is a photography student at the London College of Communication. The Student Focus contest pulled in entries from more than 200 educational institutions worldwide. The winner will be announced on 26 April.

Scandal's thriller-like twists trigger book deal

OLYMPUS AFFAIR SPARKS CALL FROM HOLLYWOOD

OLYMPUS whistleblower Michael Woodford is being pursued by Hollywood for the rights to make a movie about the scandal that has rocked corporate Japan. 'They [Hollywood] have been contacting my literary agent,' said Woodford in an interview with AP.

Meanwhile, Woodford – who was sacked as Olympus CEO after confronting boardroom colleagues over a multi-million-dollar accounting scandal – is set to launch a book about the drama.

The move is likely to cause further ripples in Japan, as it is expected to go on sale to coincide with an extraordinary general meeting for shareholders on 20 April, where the £1.1 billion cover-up will be the focus of attention.

It seems that proceeds from the publication – set to be launched elsewhere later in the year – may come in handy for a man who says that hiring the best lawyers on three continents has cost him a small fortune.

So what will it focus on? 'Central to it will be the scandal at Olympus – it's a very gripping narrative,' asserts Woodford. 'People say to me, "What was it like [exposing the fraud]?"

'I say it would be rather like walking down the street and seeing someone murdered... suddenly finding yourself having to testify, give evidence and get involved.

'The last thing in the world you want is that you were there at that point in time. I found myself in a similar position in a corporation...'

The book will also cover Woodford's childhood in Liverpool and 'moral values' – widening this out into how these translate into a modern corporate world tainted by bankers' bonuses and stories of wrongdoing.

'It's at a time when you have Occupy Wall Street and, in the UK, the furore over Fred Goodwin and his [now stripped] knighthood.

'I think a lot of people are starting to worry that capitalism is beginning to become a discredited currency, and asking how you get to a more ethical, moral capitalism.'

Michael Woodford is poised to launch a book

Corporate governance will be an underlying theme – addressing ways to avoid a repeat of such scandals as Enron and Madoff.

Woodford blames Japan's corporate culture and much of the 'self-censoring' Japanese media for an apparent reluctance to follow-up the Olympus revelations, first exposed by Japanese financial journal, *Facta*.

'A lot of people will hear no evil, see no evil, talk no evil,' adds Woodford.

Fears of an unseen evil lurking in the immediate aftermath of the crisis led the Liverpoolian to seek police protection, as rumours swirled that the fraud might be linked to Japan's criminal underworld.

Following initial reports of 'death threats', does he still feel vulnerable? 'I don't feel threatened because the story is out and I have nothing else to tell,' he replies.

Woodford has moved on and has other things on his mind, as his actions win plaudits worldwide. He has won a string of business awards – including *The Sun* newspaper's Business Crackers Award last Christmas, and honours from *The Independent*. At the time of

writing, he was in the running for the *Financial Times*' Boldness in Business Award.

Yet, despite a celebrity-like following among his Japanese supporters, he remains grounded to his Olympus roots.

The 51-year-old still misses the imaging division staff, whom he describes as 'brilliant'. And his passion for the latest Olympus compact system cameras appears undimmed. 'You just need very good products, made super-competitively.

'Olympus could do that... I'm not sentimental, I just believe,' he told AP, insisting that the camera division must have a 'slim and tight' distribution channel.

'MISJUDGED' COLLEAGUES

Although Woodford heaps praise on many former workmates, he feels 'betrayed' by others with whom he had become close, but believes he ultimately 'misjudged'.

He accepts that staff may have been reluctant to stay in touch with him afterwards, for the sake of their own jobs, but the crisis taught him a lesson.

'They encouraged me to go forward [saying] you are doing the right thing. And then when I was dismissed and Olympus [initially] denied everything, these people completely moved away... It wasn't a power struggle or a battle; I was reporting a massive fraud.

'That really haunts you... That hurts more than anything.'

Since Olympus owned up to disguising massive losses on investments, Woodford tells us he has been a 'go-to person on corporate governance' and has been invited to give lectures and advise Japanese politicians.

If he wins his ongoing civil action against the firm for unfair dismissal (see below), he has no plans to sit back.

Woodford wants to focus on his other passions – road safety and human rights.

'I've already set up a family foundation. I would dedicate my efforts to Reprieve – a charity that addresses miscarriages of justice.'

A FAR CRY FROM TOKYO

OUSTED CEO Michael Woodford is taking on his former employer at an unfair dismissal hearing in Stratford, East London.

The East London Tribunal Service is the setting for a series of tribunal hearings that began on 1 March. Meanwhile, international investigations continue into

one of the largest scandals in Japanese corporate history.

Olympus attributed Woodford's high-profile sacking, on 14 October 2011, to a clash of management styles. Woodford said he was dismissed after alerting Olympus directors to dubious acquisition payments – via a series of six letters he

had written – and then confronting his colleagues at a board meeting.

Last month, Woodford described as 'vindication' news that seven officials were arrested over the £1.1 billion accounting cover-up. Six men have since been charged with a breach of financial laws.

AP understands the hearings are taking place in London, E14, as it is the nearest tribunal office to Woodford's UK base.

Olympus Tokyo declined to comment, in view of the ongoing legal action.

1937

AP columnist Lancelot Vining wrote this week in 1937, 'I have received some curious messages in my time; here is the latest. "Mr B has badly overexposed a roll of Agfa ISS film. Do I advise his developing in paraffin?"' Vining replied: 'I see no harm in his trying this new developer, provided he does not smoke during the process, but I think he will get better results if he uses paraphenylene. There may not be much difference over the phone, but there certainly is in the developing tank.'

I see no harm in his trying this new developer, provided he does not smoke during the process, but I think he will get better results if he uses paraphenylene. There may not be much difference over the phone, but there certainly is in the developing tank.

New Developer.

I have received some curious telephone messages in my time; here is the latest.

"Mr. B. has badly overexposed a roll of Agfa I.S.S. film, do I advise his developing in paraffin?"

I see no harm in his trying this new developer, provided he does not smoke during the process, but I think he will get better results if he uses paraphenylene. There may not be much difference over the phone, but there certainly is in the developing tank.

SNAP SHOTS

● The Thai prime minister got the chance to handle Nikon's flagship DSLR, the D4, on a visit to the firm's factory in Sendai, Japan, which was hit by an earthquake last year. Yingluck Shinawatra was at the plant to 'encourage' Nikon Thailand Co workers who have been temporarily transferred to Japan after the flooding in Thailand last year.

● Harman technology has sold 1,000 of its Titan 4x5 pinhole cameras. 'Sales are way ahead of our expectations,' says sales and marketing director Steven Brierley. He added: 'We are continuing to get enquiries from all around the world and are doing everything possible to complete all orders as quickly as possible.' The firm reached the milestone at the Focus on Imaging show in Birmingham earlier this month.

DSC-HX20V due out in May

SONY UNVEILS NEW CYBER-SHOT FLAGSHIP MODEL

A NEW line of Cyber-shot models from Sony has been released, headed up by an 18.2-million-pixel compact camera with a 20x optical zoom.

Due out from mid-May, the Cyber-shot DSC-HX20V sports a Sony G lens that is designed to deliver the 35mm viewing angle equivalent of a 25-500mm zoom.

Features include exposure compensation of $\pm 2\text{EV}$ in $\frac{1}{3}\text{EV}$ steps, plus full HD video (50p) and a 7.5cm LCD screen

(921,600-dot resolution). Also in board is the ability to shoot 3D images, plus GPS.

The HX20V will cost £399.

Also due out in May is the DSC-WX100, which is touted as the world's smallest and lightest compact camera with a 10x optical zoom.

The WX100 measures 21.6mm at its thickest point and weighs around 108g.

Priced £229, features include a 25-250mm equivalent lens and 6.7cm LCD screen.

MINOX SCALES BACK COMPACT LAUNCHES

MINOX has issued a statement on the future of its 'point-and-shoot' compact cameras after the firm's managing director suggested they were no longer worth investing in.

In January, Minox's managing director Thorsten Kortemeier hinted that the firm was pulling out of the digital compact camera market in the face of increased competition from camera phones.

Speaking at the CES trade show in Las Vegas, Kortemeier told AP: 'We will not do any more compact cameras. I will not invest in them any more.'

However, in a bid to clarify the comments after an apparent flood of enquiries to the company's HQ in Germany, the

firm has issued a statement that reads: 'According to GfK (community for market research), the market for digital cameras as a whole has gone markedly down, largely due to the increased use of mobile phones as a camera.'

'For this reason, Minox is concentrating on digital camera niche products, such as the Digital Camera Classic, Spy Camera, trail cameras and sport optics products that make up more than 60% of the gross turnover for Minox.'

While Minox is due to launch the new 16-million-pixel DC 1611 compact camera in May, a spokesperson conceded that the firm may launch as few as one or two models each year.

The latest photography books, exhibitions and websites. By Oliver Atwell

BOOK

The Quest for the Man on the White Donkey

By Yaakov Israel

Schilt, hardback, £29.95, 136 pages, ISBN 978-90-5330-764-9

THE BEGINNINGS

of Yaakov Israel's project were unusual, to say the least. According to Orthodox Jewish tradition, the Messiah will arrive riding a white donkey. One day, while photographing near the Dead Sea, Yaakov noticed a Palestinian man riding by on a white donkey. Yaakov took a photo and his project entitled The Quest for the Man on the White Donkey was born.

The project took Yaakov on a journey across Israel, where he attempted to explore the emotional reactions he experienced when visiting the various locations and encountering people on his journey. It's a project that is essentially influenced by the great tradition of American journey photography, such as William Eggleston's shots of suburban America. The unusual genesis of the work adds an interesting weight of mystery to the whole affair, making it strangely compelling. The images and subjects contained within the book may not be for everyone, but the conviction of it is difficult to deny.

© YAAKOV ISRAEL

© YAAKOV ISRAEL

WEBSITE

www.statementimages.co.uk

STATEMENT Images is a collective that explores the world through imagery, whether still or moving. Each photographer works within the realms of documentary imagery, but this isn't the standard news photography we're used to seeing day after day. The artistry of a great number of these works is really spellbinding and inspirational. It speaks volumes for the fact that documentary photography doesn't need to consist of just straight reportage – it's a genre that has established itself as a real creative force. This is a great, easily navigated website and well worth your time.

© RENE BURR/MAGNUM PHOTOS

EXHIBITION

Magnum 62

24 April–19 May. Chris Beetles Fine Photographs, 3-5 Swallow Street, London W1B 4DE. Tel: 0207 434 4319. Website: www.chrisbeetlesfinephotographs.com. Open Mon-Sat 10am–5.30pm. Admission free

MAGNUM doesn't exactly need an introduction. Its photographers have been providing the world with some of the most iconic images ever taken. This fascinating exhibition displays a single photograph by each of the agency's 62 members and features such massive names as Martin Parr,

Robert Capa and Henri Cartier-Bresson. Magnum is a genuine behemoth in the world of photography, and the opportunity to view some of its most iconic images in one space is an appealing prospect. If you have a serious passion for documentary work, make sure to catch this exhibition.

© YANN MINGARD

Repaires

By Yann Mingard
Hatje Cantz, hardback, £32.50,
84 pages, ISBN 978-3-7757-3315-1

BOOK

THE FOREST is a place of great mystery, occupying a special niche in the history of storytelling and in the darkest corners of our primal fears. Yet as dark and strange as Yann Mingard's images are, they're not supposed to induce a feeling of anxiety, or at least not in the way you would imagine. Instead, the pictures serve as reminders

of the things we are seeing gradually disappear in our modern, industrialised world. Mingard is a trained horticulturist and knows full well just what is at stake. His images take us deep into the most unseen areas, places that are near untouched by light and human presence. His long exposures taken at twilight are undeniably eerie, but they are also accomplished and fascinating.

CONDENSED READING

A round-up of the latest photography books on the market

● **PHOTOGRAPHY: THE NEW BASICS** by Graham Diprose and Jeff Robins, £22.50 This book acts as a basic photography guide, but with the angle of ensuring that all the principles can be applied to the digital age. It's an incredibly readable and pleasingly visual guide, and would be a great buy for anyone just starting off in photography.

● **A YEAR IN THE LIFE OF WIMBLEDON** by Joanna Jackson, £16.99 This little guide takes the reader on a visual tour around the diverse area of Wimbledon. The project spans a year and takes us through the lush spring sunshine to the chilly winter. It's a nicely produced book and one that will most certainly appeal to local residents and those living nearby.

● **TAKING THE WATERS: A SWIM AROUND HAMPSTEAD HEATH** by Caitlin Davies, photography by Ruth Corney £12.99 This book documents the swimmers who visit the four unique swimming spots on Hampstead Heath that attract more than a quarter of a million visitors a year. It's a nicely researched book and some of the stories from the swimmers are fun to read.

● **MILITARY LOW FLYING IN THE UK: THE SKILL OF PILOTS AND PHOTOGRAPHERS** by Michael Leek, £25 This book collects a series of images that document the tactical military manoeuvre of low flying. It's genuinely impressive just how close some of the images are (you can often see the pilot in the cockpit), but it's a series of images that quickly becomes familiar.

FUJIFILM

SO BAD, IT'S... AWFUL

How bad does a camera have to be in order that 're-engineered' versions of it are available? Ivor Matanle's *Icons of photography* (AP 17 March) featured the 'iconic for all the wrong reasons' Kiev 60. In a moment of madness, I bought one a few years ago. A friend who'd returned from working abroad showed me a Kiev 60 he had acquired on his travels. His images – on the still then available 120 Kodachrome 64 – were superb. He loaned me the Kiev to try out before buying one myself. It was a big leaden lump of a camera, but it performed so well I ordered a brand-new one.

About four films later, I realised that either my mate had been very lucky or I had been very unlucky. It seemed to me to be the equivalent of a camera body with the innards of a stereo, such was its total inability to do any of the tasks expected of it. Lousy frame spacing meant frequent double exposures. The camera's shutter speeds were miles out, and the dreadful grating noise when winding on the film was painful.

The sudden availability of 120 Kodachrome had seen me champing at the bit for a medium-format camera. I got unlucky and chose a Kiev 60. When I received yet another processed roll of Kodachrome 64 displaying the Kiev's massive failings, I threw the camera in the bin. The same day I bought a brand-new Yashica Mat 124G TLR – and it's one of the best buys of my life. Sadly, Kodachrome in all its formats is now extinct, but my Yashica Mat is anything but. It's a sleek, handsome-looking camera that nowadays seems rather quaint but which gives me negatives that I can scan to produce superb-quality inkjet prints.

Ivor Matanle spoke of re-engineering the Kiev to correct its engineering tolerances. My own tolerances – and I'm sure those of many other frustrated Kiev 60 users – were tested to the limit trying to attain decent results from what Ivor called 'one of the most disrespected medium-format camera of its time'. I hate to disagree with the hugely knowledgeable Ivor, but the Kiev 60 wasn't even *that* good! **Dave Swann, Tyne & Wear**

If you got a good one, the Kiev 60 was great value. If you didn't, it wasn't! The 124G, on the other hand, is a great camera, but somehow rather more costly than it's worth compared to some of its alternatives – Damien Demolder, Editor

GRATEFUL FOR THE HELP

I would like to respond to AP reader Paul Russell (*Letters*, AP 3 March) regarding my own letter (AP 18 February) concerning my airgun-toting 'knight in a shining anorak', who I'm convinced saved my life. He himself was the victim of a vicious attack two years earlier. He was set upon by thugs who slashed his neck with a knife, causing a wound that required 28 stitches. His left arm was broken and he also lost a front tooth. And that was before those b*****s stole his bag full of very expensive photo equipment.

His choice to carry around an (unloaded) air pistol isn't to everyone's taste – and particularly to those like Paul who haven't experienced that indescribable terror, when you're threatened by a gang of yobs intent on doing you very real harm. Believe me, when such a moment arises, you're glad of rescue in whatever form – even when it's in the shape of someone carrying an airgun. **Neil Swann, Tyne & Wear**

NOTHING NEW

I have read many letters in AP over recent years discussing the merits of film versus digital, and in AP 3 March Mr Griffiths felt that 99% of the work should be done when you press the shutter, and that image manipulation is an art in itself. It is sad that film versus digital should be an either/or argument. I see it as a 'what you enjoy' discussion, to which the answer is 'both'.

As for all the work being done at the point of pressing the shutter, that's fine if that is your particular challenge, but I'm afraid I sometimes take a photograph while bearing in mind what I'm going to do afterwards in GIMP... which leads me to a 1960s tale.

Back then, I worked with a photographer/photo retailer, shooting, among other things, weddings. On one occasion we had produced a set of wedding proofs, and in the best all-round negative chosen for the large group the bride's mother had her eyes closed. I merrily used my retouching/spotting skills to open her eyes and off the proofs went. Guess which shot the family wanted 20 whole plates of...

So many wheezes were used then, let alone darkroom techniques such as bas-relief, solarisation, hand colouring, masking fluid, air brushing, and so on. There's nothing new! **Anne Lowe, Hertfordshire**

Fluid masking and brush retouching – what a nightmare all that was for me! – Damien Demolder, Editor

LOST AND FOUND

Bill Houlder's letter in AP 17 March warned of using digital cameras as portable photo albums. As in the case Bill highlighted, it's a particularly bad idea when you can lose your camera or memory card.

When I began shooting digital, memory cards were fairly expensive and I didn't run to owning several as I do now. While on holiday in Blackpool, I'd been shooting pictures for several days on a 4GB card. It also contained shots of the beautiful flowers at a late friend's funeral two months earlier,

What The Duck

<http://www.whattheduck.net/>

CSC AIN'T HEAVY...

I would like to enlighten RG Jackson (*Letters*, AP 17 March) about the usefulness of compact system cameras. Like Mr Jackson, I have been an SLR user for many years, culminating in the ownership of a Nikon D700. A recent pastime of mine has been treading the towpaths of the Grand Union Canal, accompanied by the

D700 fitted with a Nikon 28-300mm lens. The result of these forays, usually lasting all day and covering anything up to 12 miles, has been, apart from the pictures, back, neck and arm ache from lugging this beautiful brick of a camera around.

So, in order to alleviate these symptoms, my search for lighter equipment led me to the Sony NEX-7, fitted with the Sony 18-200mm lens. This combination is less than half the weight of the Nikon and has twice the number of the pixels, and far less of a social embarrassment. It also means that, weight-wise, I can now carry a wideangle zoom lens around for those moments when stepping back for a wider view could have resulted in a dunking in the canal. **Brian Parkin, London SE26**

You are right, Brian. Too many photographers dismiss compact system cameras as toys, when actually they are very capable. I'm not sure what is socially embarrassing about the D700, though! – Damien Demolder, Editor

© BRIAN PARKIN

as well as images of the mourners.

We spent a rather jolly last night of our holiday in a pub, and I awoke next morning to a horrendous hangover. Curious to see the previous night's events, I grabbed my camera, but the display said there was no card inside. I asked my wife if she'd taken the card, but she was as puzzled as I was about its whereabouts. We called at the pub to see if the card had been found, but alas, it had not. All those memories had gone for ever. It was the first time we'd ever returned from holiday without any photos. Along with the loss of those other images, we were gutted.

The following week we received a phone call from the manager of the pub where we'd spent that last night. Our memory card had been found in a nearby street by another holidaymaker, and the manager very kindly posted it back to us. Phew! Since then, I've never relied on just a single memory card and always download my photos as soon as I can.

A nice footnote to my story is that I found four images of my late friend in the camera's internal memory, which I'd forgotten were there. Taken in happier – and healthier – times, I was delighted to be able to supply some prints for his family, who were visibly moved by them. My wife believes all things happen for a reason. She thinks that losing our memory card was meant to be. Otherwise, we may never have found those 'lost' images of our late and much missed friend in the camera's internal memory.

Adam Irving, Tyne & Wear

A GLASS ACT

George Parapadakis, in his letter in AP 10 March, stated: 'The last thing anyone would

want to carry around with their CSC is the beautiful, expensive and monstrously heavy glass that they use with their DSLRs.' This seems to say that all CSCs are equal and not suited for use with expensive lenses. Nonsense! It is the quality of the sensor (and associated hardware and firmware) that matters, not whether it is contained within a CSC or DSLR. I plan on replacing my DSLR with the Sony NEX-7 CSC, but I will also be retaining my Panasonic Lumix DMC-G1 and intend to use both cameras with my expensive glass. I use the Lumix extensively with my 150mm macro plus a 1.4x extender and that combination produces excellent results.

Cluny MacPherson, London E11

BELT AND BRACES

Your correspondent Keith Baker asked about suitable storage media to accompany him and his Leica M9 on a trip to India (*Ask AP*, AP 3 March). When I looked at storage viewers to accompany me and mine on a trip to Italy, I found there was also a potential compatibility issue in storing certain types of raw images on viewers. I wasn't sure that the Epson models would store and display the M9's DNG format, so I opted for Vsonic's VP8870. It will store and display them, but the colour rendition is not great. However, I was mainly interested in back-up, and from that viewpoint it was fine. Keith's best bet is maybe to adopt a 'belt and braces' approach and save his once-in-a-lifetime images on both memory cards and a viewer.

Neil Pascoe, via email

Most of the Epson viewers can display DNG files – Damien Demolder, Editor

BACK CHAT

AP reader Jimmy Anderson salutes the iconic Antarctic photographer Herbert Ponting

EXPLORER David Hempleman-Adams regards Herbert Ponting's superb 'Grotto in an Iceberg' image as being 'as significant an image as Neil Armstrong standing on the Moon for the first time' (*Icons of Photography*, AP 25 February). Looking back, it's reasonable to assume that those pioneer explorers of the Antarctic, who faced a hitherto unknown part of the world, were setting themselves, for its day, a challenge seemingly as impossible as a trip to the Moon.

David Clark rightly made the distinction that Ponting's photograph went way beyond simply being a record shot and is seen as a true work of art. Any of us who have attempted to take pictures on cold winter days or nights, even in normal urban environments, know full well that it's all too easy to simply admit defeat to the freezing conditions and head for home or the nearest pub. The physical – and sometimes mental – effort required can become simply too much for even the most ardent photographer. Yet imagine the conditions that Herbert Ponting worked under on the Scott expedition! Aside from the brain-numbing cold, he had to lug about a glass-plate camera on a large and cumbersome wooden tripod, while all the time watching his footing on that perilous territory. His dedication to the task was beyond question. And after exposing several images in that fearsomely cold environment, you can imagine the sheer pleasure Ponting must have got from working in his cosy darkroom at the expedition camp while those Antarctic winds and blizzards howled outside.

I saw a wonderful TV documentary a few years ago in which a modern-day expedition to the Antarctic visited the old Scott camp. Some of the photos from that expedition formed part of a feature that appeared in AP at the time, and there in the photos was Ponting's darkroom exactly as he'd left it. As it said in the feature, it was just as though he'd walked out of the room and would be returning any second. To see the very place where all of Ponting's magical images were brought to life was a wonderful – if rather eerie – privilege. And his tally of more than 1,000 glass-plate negatives of the expedition demonstrates his total passion and love for his work.

Had Ponting had been equipped with something like a Canon PowerShot G12 digital compact, his work would clearly have been a lot easier. Yet in that merciless and unforgiving environment, in which no one knew what might lie just around the corner, to have achieved his astonishing archive of photographs using a bulky camera and tripod combination – and with a watchful eye on the ever-present dangers – Ponting fully deserves his recognition as a dedicated and truly iconic photographer.

FREE with next week's issue of AP... Pocket window light diffuser

To coincide with the final instalment of our series on window-light portraits, next week we will be giving away a free window light diffuser with every issue*

THE FABRIC diffuser free with the 7 April issue of *Amateur Photographer* attaches to a window via suction cups positioned in each corner, making set-up extremely quick and easy. The best conditions for use are in bright, harsh sunlight, usually from east- or west-facing rooms in the morning or afternoon respectively. When the diffuser is attached directly to a glass window, the semi-opaque material diffuses bright sunlight, which softens shadows and gives portrait images a softer, more flattering appearance.

By having a subject sit close to the diffused window, the effect is similar to that of a softbox, especially if curtains or blinds can be used to black out the rest of the window. The softer the light, the more flattering it will be to the subject so, like a softbox, the effect will be at its best when the subject is as close to the light source – in this case the diffused window – as possible.

If you have a large window, you can link together more than one diffuser to cover a larger area, or if the light is particularly strong and direct the diffusers can be overlapped to enhance the softening effect.

Of course, the diffuser can be used for

more than just portraits. Still-life and macro scenes will also benefit from the softer light it creates. Simply set up a table next to a window and use the diffuser in the same way as you would for a portrait. A piece of white card will increase the effect by

bouncing soft light back onto the subject.

Best of all, the Olympus-sponsored diffuser can be easily folded and comes in a small pouch so you can keep it tucked away in the bottom of your camera bag when not in use. **AP**

The diffuser softens window light to create a more flattering and evenly lit portrait

PHOTO INSIGHT

In his final *Photo insight* for AP, Frans Lanting discusses his thinking behind this photograph of two albatrosses taken in the Falkland Islands, and explains how using a wideangle lens helped him capture this stunning shot

FRANS LANTING

One of the most accomplished wildlife photographers of our time, Frans has won numerous awards for his immersive style of working. He will discuss his favourite pictures and share his techniques for capturing dynamic nature images

I TOOK this image while working on a story about albatrosses for *National Geographic* magazine about six years ago. I've been interested in albatrosses for a long time and am fascinated by the lifelong bond they form. Albatrosses roam the open ocean by themselves, being seabird nomads that cover enormous distances searching for fish and squid, and they only come ashore on remote islands to find a partner and reproduce. However, once they court and choose a mate, albatrosses maintain an intricate partnership for life. While one bird sits on the nest to incubate an egg or guard a chick, its mate may cover more than 10,000 miles on a single foraging trip before it returns. It takes two parents more than half a year to raise one chick to independence and they can perpetuate that pattern for decades. I keep challenging myself to come up with new ways of portraying them, and in the Falkland Islands a colony of black-browed albatrosses gave me the idea for an unusual image.

I was photographing in a huge colony where there were thousands of albatrosses. I selected a couple of pairs of birds to focus on and tried to work with them as intimately as I could. This approach has served me well over the years. Rather than dashing all over the place trying to capture lots of different birds, I'll choose a setting I feel is suitable, seek out a couple of birds and forget about the rest.

I wanted to show the intimacy of one bird's face up close and include another bird flying in the background to suggest their partnership. I noticed a lone bird on a nest at the edge of a cliff with nothing but the ocean and sky beyond, while other albatrosses were wheeling back and forth. I settled on this bird because she was very tolerant of me and was in a great position. If I'd had a negative effect on the bird I would have backed off – you can't create meaningful wildlife images if you're getting reactions of fear or avoidance.

That said, albatrosses are a wildlife photographer's dream as they have little fear of people so you can get fairly close

to them, which opens up more creative opportunities than if you were sitting looking at them through a 600mm lens. If you keep a low profile and move slowly you can get quite close without disturbing them. Once the birds are comfortable with you, they seem not to mind you being there. I always like to infuse my images of birds and animals with a sense of intimacy, as if you're looking at an individual. I'm very close to the bird in the foreground, probably being only about 1ft away. I also like to create abstractions

from situations if I can, and here the unusual framing lends a sense of abstraction.

I began to visualise the concept of having one bird on the land and one soaring through the sky over the sea. Once I had the foreground bird positioned where I wanted in the frame, it was a matter of waiting for the other bird to fly in the background to suggest the connection between the two. This took a bit of time as I had to wait for the wind to subside. In fact, I spent quite a few hours on subsequent days

To see more images by Frans Lanting or read his World View columns, visit www.lanting.com

WORLD VIEW

© FRANS LANTING

working on this image until it finally clicked.

I took the image with a wideangle lens that enabled me to exaggerate something in the foreground and still depict something in the background. I had to close my aperture all the way down, but I also increased the ISO so my shutter speed remained high enough to capture the bird in motion in the background. I used my Nikon D2X camera with a 12-24mm lens, and had my camera set to 1/250sec at f/18.

I had to compete with quite challenging

Falkland Islands weather. We experienced every different type of weather condition, from overcast, dull skies to brighter conditions, but the moment this image was taken the light was fairly diffuse. Direct sunlight on a white bird would have resulted in bleached-out highlights.

Sometimes I compose my images as a sculptor might – the more you take away, the more you reveal. To me this is an image that is about the bird in the sky (and its relationship with the ocean) and

also the relationship with its partner in the foreground. By stripping everything else away the meaning of the image becomes clearer, I hope.

It took several hours of careful manoeuvring around the bird on the nest and much patient waiting for the bird to fly through the right part of my composition to pull together a scene that expresses the dual identity of albatrosses – solitary wanderers that mate for life. **AP**

EXCLUSIVE 4-DAY PHOTOGRAPHY WORKSHOP

WITH CHARLIE WAITE AND DAMIEN DEMOLDER

BOOK NOW
£895pp

Photographer
What Digital
Camera

Due to popular demand, we've decided to run another exclusive Landscape Photography workshop hosted by landscape legend Charlie Waite and AP Editor Damien Demolder.

This exclusive tour will take place from 7-10 May 2012 among the enchanting landscapes of the Lake District. A group of just 14 photographers will be given guidance and tuition by these two top photographers in their field.

Based in the heart of the Lakes, at the charming Borrowdale Hotel, the group will travel in two minibuses to fantastic locations further afield. Charlie Waite, the founder of Light & Land, has a wealth of experience photographing Lakeland scenes and is expert at finding those magical

compositions that often elude others. Damien Demolder is gifted at explaining creative technique, as well as being knowledgeable about photographic equipment and its use.

The Lakes provide an astonishing variety of landscapes, from the bucolic beauty of sheep grazing in the Newlands Valley and the stark setting of the Neolithic Castlerigg Stone Circle beneath shapely Blencathra to the lovely wooded shore of Rydal Water, the awesome Hardknott Pass and the towering bulk of the Scafell range, with England's highest mountain.

The evenings will provide the opportunity to receive constructive feedback on your own work. This tour is designed to appeal to photographers of all levels and experience, whether they use digital or film, and any format.

Charlie Waite

Damien Demolder

INFORMATION

Dates: 7-10 May 2012

(arrive evening 7th, depart evening 10th)

Price: £895 per person

Includes: Full-board accommodation, with daily packed lunch, transport during tour, tuition from Charlie Waite and Damien Demolder.

Excludes: Travel to and from hotel, insurance.

Final booking: 30 March 2012

Contact: Light & Land at www.lightandland.co.uk or call 01432 839 111. Full terms and conditions at www.lightandland.co.uk.

For full details or to book online visit www.lightandland.co.uk or call 01432 839 111

Force of nature

Former *National Geographic* photographer **Jim Brandenburg** has joined AP's *Photo Insight* team. He talks to **Oliver Atwell** about nature photography and how he achieves his grand, sweeping images

SOMETIMES the most interesting photographers are the ones who are difficult to define. When photographers first start out, they often try their hand at just about every genre going, from landscapes to wildlife to street photography. Later, they will tend to focus exclusively on one subject and hone their skills in that genre. However, look a little closer and you'll often see that those images bring in a wide variety of disciplines.

Looking through the images of Jim Brandenburg, who was with *National Geographic* for around three decades, it's clear he is a photographer who is more than comfortable working both the wildlife and landscape angle under the banner of nature photography. These days, Jim busies himself producing work to adorn the walls of his two galleries, The Ely Gallery and The Luverne

Gallery, both of which are in his home state of Minnesota in the USA. Yet regardless of whether it's journalistic work or his own personal artwork, Jim's nature images are notable for their treatment of both animal and landscape subjects as mutually dependent components.

'I take that as a massive compliment,' says Jim. 'I don't want to be pigeonholed as a wildlife or a landscape photographer. Both elements are present. I'm not photographing animals in a zoo. I want to show the animal doing what it does in its natural environment and display it with a degree of artfulness. The more information you can include about your animal subject within an image, the better. This is something that comes from my years on *National Geographic* – ensuring there's a context.'

'Wildlife photography has kind of had its fill of photographers using long lenses and trophy shooting. A few years ago, I used a Nikon 300mm lens and found that I couldn't get close enough. Then I switched to a 20mm lens and it was much better, as it allowed me to present a dramatic and inclusive series of images.'

Having worked for *National Geographic*, Jim has often found himself using a series of images to communicate a story about his subject. However, as he points out, using a single image can really train a photographer to hone his or her skills at storytelling.

'If you're able to learn how to sum up a story in a single image, it's a fantastic skill to have,' says Jim. 'It teaches you to be economical with your time and content. It's like working for a newspaper. There is generally only one crucial image to tell you everything you need to know about that story. These days I tend only to work in single images because I'm considering how that image will look on my gallery wall. I can't remember the last time I shot a picture story.'

'Having said that, I recently received a grant from the French government to photograph the coast of Brittany, which will be included in a travelling exhibit. It will feel strange going back to that way of working. I'm not too worried, though, as I'll fall back into that mindset easily enough.'

RURAL UPBRINGING

Jim's images are closely connected to his affinity for the natural world around him. His dedication to presenting his subjects in a positive and inspiring light comes largely from his upbringing.

'To be honest, I can't quite believe that everybody isn't obsessed with nature,' says Jim. 'Perhaps it's something to do with the widespread industrialisation of the world where we're almost told that we don't need nature and that we can tame it. You have people denying evolution and global warming to the point that it's become obscene. We're animals and we have a place in the natural world.'

'I grew up in a rural area in South Dakota that lies pretty much in the centre of North America. It's a big, beautiful and wild area. I actually began as a hunter at around 13 or 14, but realised rather quickly that I could swap the gun for something much better – the camera. I was in love with nature. Photography gave me the excuse I needed to

go out and enjoy the land and the things that lived there. These days I feel naked if I don't have my camera around my neck. In some ways I wish I could evolve from the camera to my eye and just enjoy being outside.'

Jim is a largely self-taught photographer who has spent years determining exactly what it is that appeals to him about photography. Faced with such a broad subject, he finds it easier to break his images down into separate components.

'When you've been shooting images for around 40 years, the whole process becomes almost subconscious,' says Jim. 'It's like breathing – you just do it. But if I'm forced to think about it, I'd say that I see images as being broken down into three elements: the light, the composition, and the moment that everything falls into place and these things come together. These things won't always be present within the same shot, but when they are you have something special.'

'I've found that this only happens around four or five times in your lifetime. A lot

of the time you'll have incredible light or composition, but the subject isn't so special. Other times it's the other way round.

That's photography – searching for those moments where everything fits together.'

Jim admits that although he has many years of experience under his belt, he's not infallible.

'While there have been times when the elements have come together in front of me, I'll admit that sometimes I screw up,' he says. 'These things only last for a moment, and if you're not ready you'll miss them. It could be that I didn't have the camera quite ready or back in the old days I couldn't quite get the exposure I needed. That would be when I was working with film. In the early days of working with Kodachrome and light meters, you didn't have time to mess around. These days it's not quite so high pressured because digital cameras and post-processing software can help you to salvage images that haven't quite got the required exposure.'

Above: A good example of Jim's intriguing approach to composition

Right: Red-winged blackbirds against the setting sun

Left: Jim's use of light is one of the most striking elements of his work

BEING PREPARED

Considering that Jim works in many locations with subjects that can at best be described as unpredictable, preparation and research must surely be vital in his work.

'I sometimes feel that you can never over-prepare for a shoot,' says Jim. 'In the days of working for *National Geographic*, we had all the resources possible. Once you'd completed a project, it was like you'd achieved a masters degree. They'd give you all the time you needed to research. We'd actually do research trips and be able to scout the locations out beforehand. I remember going to Moscow once just to research a story on the Vikings that I was working on. That way of working tends not to exist any more because everything is done mostly via emails. The thing is, you must always ensure you have yourself covered.'

However, even when totally prepared,

Jim still ensures that he's ready for chance occurrences. 'You need to be ready because it's incredibly rare that you get the pictures you have in your head,' he says. 'It's always a surprise. If you're doing a story for a magazine, then you'll have a checklist of things that you need to make sure you get. If you're doing your own thing, then research isn't quite so important. You can go to a place where you love the subject and wait for the light. Intuition and serendipity are good friends of mine on a lot of shoots.'

As Jim is still in contact with some of the people working behind the scenes at *National Geographic*, and has experience with other such notable organisations and publications as *Time*, *Life* and *BBC Wildlife*, he has clearly seen how the journalistic experience has changed over the years. As is to be expected, the turn-around of images and articles has accelerated rapidly.

'Some people back in the day could have spent a year working on their projects,' says Jim. 'Sometimes they had to produce about 30 pages of work. Time and money were never really an issue. There were no excuses if you messed up. You had as much film as you needed and the magazine would fly you first-class to just about every location. You'd get the best cars and translators. Now it's another world. It's still a great job, but the time restrictions are a little more intense. Five weeks seems to be the given now and budgets are greatly restricted.'

'The biggest change is probably the cameras. If I could take the cameras we have now back in time it would be life-changing. It makes me think of all the images I missed. The ISO capabilities would have made a dramatic difference. I don't know if people know how lucky they are these days.'

EQUIPMENT

Given the epic sweeping nature of Jim's images, it would be tempting to imagine him wielding some serious equipment. Although this is true for his larger projects where he'll use a model like a Nikon D3S, his favourite set-up is actually a little more low-key.

'Right now I'm using a Nikon D7000,' he says. 'I love that little camera. It's the one I choose when I'm walking around on my own. It's small and nimble. If I were to go out for a couple of days around London, for example, then I'd take the D7000 with 28-300mm and 20mm lenses. The 20mm fits into my pocket and is very portable. I've taken a great number of images with that simple little set-up. When I'm doing larger projects, I'll pull out the "big boy" cameras.'

One of the 'big boy' cameras that Jim is referring to is actually a model that has yet to be released. Recently, he was asked to try out Nikon's new D800 DSLR.

'If I had to pick one camera, that's the one I would go for,' says Jim. 'Its resolution is unprecedented. It's actually a 36.3-million-pixel model. I have a print hanging in my

home that is about 44in wide and it looks like it was shot with a 4x5 camera or a Hasselblad. The D800 has great ISO characteristics and fantastic tonality control as well. I always wanted to shoot with a 4x5, but I'm far too impatient. This is the next best thing.'

PRAIRIE PRESERVATION

Jim is one of the judges of the 2012 Veolia Environnement Wildlife Photographer of the Year competition, an international showcase for the very best in nature photography.

'We've had thousands of images and I can honestly say I'm blown away,' he says. 'There are no categories with regards to professional and amateur, and sometimes you really don't know the difference. There are some of the world's top photographers, such as Andy Rouse, sending things in. But then you have people who only pick up a camera two or three times a year. I don't know any other art form where professionals and amateurs can rub shoulders in that way.'

'I just took a tour of the 2011 exhibition and it's stunning. There's a lot of magic there. The images also speak volumes for how much digital technology has changed

Above: Providing a context for his subjects is of vital importance to Jim

photography. Lots of these images would have been impossible in the days of film. Night exposures where you can actually see the Milky Way would have been near impossible back then.'

Jim is further involved with a subject that is very close to his heart. In 1999, he set up the Brandenburg Prairie Foundation, which aims to promote, preserve and expand the native prairie of south-west Minnesota by raising awareness and sourcing donations.

'I grew up around prairies and learned

A pair of loons bathing in the warm ethereal light of dusk

to photograph in those areas,' he says. 'I think that prairies are one of the most endangered ecosystems in North America. It's a huge area stretching from Chicago to Nevada, way up into Canada and down into Texas. There are huge swathes of this environment that have been ploughed up and turned into cornfields. Some of the finest crops in the world are grown there. The problem is that there's very little prairie land remaining.

'I've been fortunate in that I've found support from people with similar feelings and they've all been very encouraging. I see these lands as my birthright and I feel a certain responsibility to help preserve them. I've made my living from nature and I want to give something back.' **AP**

Right: Jim's subjects range from the great to the small

Below: Varying weather conditions can provide some fascinating images

Below: In this shot, light, composition and timing all come together to create a great image

KODACHROME VS VELVIA

'I WAS shooting a project in the areas of North America that had essentially remained untouched by man,' says Jim. 'They were as Columbus would have seen them all those years ago. It was during this time that I took to shooting all my images using both Kodak Kodachrome and Fujichrome Velvia because I wanted to see how different they were. I'd say that Kodachrome defines most of my career. If you talk to any of my colleagues, you'll find that Kodachrome brings a smile to their faces, although it does have its limitations, such as the speed.

'While Velvia didn't necessarily improve on this flaw, it did heighten the colours. It handled the blues and the greens much better than Kodachrome, which could tend to turn the greens a little muddy. I eventually switched to Velvia once I began seeing the results. It just seemed to be the best film all round. It was as sharp as Kodachrome and about the same, grain-wise, but with Velvia the colours of the sky were true to reality and the greens were excellent. Velvia was also great with reds and skin tones. It was much better at handling the whole spectrum of colours.

'The processing was also much simpler with Velvia – it was done through E-6 processing. I could just take it down to the local photo lab and get it processed. So if you ever see a photographer attempting to mimic the look of Velvia on the settings of the digital camera, these are some of the reasons why.'

Photographer
OF THE YEAR
COMPETITION**

Water in the Landscape

The results are in for the **first round** of APOY 2012. We publish the top 30 images

Gary Telford, of Blackpool in Lancashire, is the winner of our Water in the Landscape round of APOY 2012. Gary will receive a Samsung NX200 with 20-50mm f/3.5-5.6 kit lens, a Samsung 16mm f/2.4 Ultra Wide pancake lens, a Samsung ED-SEF42 flash and a 16MB SDHC Plus memory card, worth a total of £1,298.96. The NX200 is a compact system camera with a 20.3-million-pixel, APS-C, CMOS sensor. It has high-speed capture (7fps) and ultra-fast autofocus (100ms), while the ISO range of 100-12,800 lets you take high-speed photos even in low light. Samsung's i-Function technology allows you to control image-capture settings manually via the lens ring. Our second-placed winner is **Roman Solar**, of Slovakia, who will receive a Samsung WB750 compact camera and a 16MB SDHC Plus memory card, worth a total of £288.98. With its 12.5-million-pixel BSI (Back Side Illuminated) CMOS sensor, the Samsung WB750 makes it easier than ever to deliver consistent high-quality images. The WB750 also features a 24mm ultra-wide lens with 18x optical zoom (24x Smart-Zoom feature), 1080p full HD video recording and Creative Movie Maker that lets you combine stills and video to create slide shows. **Alan Elce** of Mansfield, Nottinghamshire, finished third in the round and wins a £250 Jessops Gift Card.

THE 2012 LEADER BOARD

After Round 1 judging, Gary Telford has taken the lead, and there is only one point between the first, second and third winners. It may be early days, but already the competition is close. Dan Deakin, who came fifth overall in last year's APOY competition, is currently in joint fourth place with 36 points.

1	Gary Telford	39pts	4	Malcolm J Porter	36pts
2	Roman Solar	38pts	4	Catherine Holland	36pts
3	Alan Elce	37pts	4	David Thorne	36pts
4	Dan Deakin	36pts	4	Guy Wells	36pts
4	Ben Ghibaldan	36pts	4	Adrian Trendall	36pts

Queen Elizabeth II, 1968

Royal appointment

To celebrate the Queen's Diamond Jubilee, the Victoria and Albert Museum is showcasing a selection of **Cecil Beaton's** portraits of the royal family. **Susanna Brown**, curator of photographs at the V&A, talks to **Oliver Atwell** about the exhibition and explains how Beaton drew on the influence of his contemporaries

‘Beaton was endlessly inventive. He could draw on a variety of backdrops that he had designed himself’

adult life. He was able to capture her when her first child was born and the subsequent children that followed.

‘He was able to access the Queen and represent her as a relatable human being,’ says Susanna. ‘But he was also able to photograph her as this figure of authority in her official attire. He was able to capture those two distinct sides of her character, both on and off-duty. The image that Beaton shot of the Queen with Prince Andrew against the stark white backdrop in 1964 [see left] was intended to convey a more accessible image of the royals. The white background is very important in that respect. It keeps the location neutral, meaning it’s a shot that could have taken place in anyone’s home. It also presented a more modern view of the royals as being down to earth. There’s nothing lavish about it.’

Queen Elizabeth II with Prince Andrew, 1960

An interesting thing to note with Beaton’s images is that at no point do you ever feel you’re seeing the same image twice. Despite photographing the same family, and often the same person, time and again, each image feels fresh.

‘The variety of Beaton’s images is down to his absolute creativity,’ says Susanna. ‘He wasn’t just a photographer – he was also a theatre designer, a painter and an illustrator. He was endlessly inventive. He could draw on a variety of backdrops that he had designed himself. He would bring in such things as flowers from

Princess Elizabeth at Buckingham Palace, March 1945

SOME photographers have their place in history set in stone, with their work still being talked about and examined many years after the images have been taken. For example, where would photography be without the stunning Yosemite landscapes of Ansel Adams or Robert Capa’s breathtaking war photography? And where would portrait photography be without the accomplished images of bohemian socialite Cecil Beaton?

With many of his photographs shot for *Vogue* and *Vanity Fair*, Beaton soon became known for his bold use of sets and his ability to press the shutter at just the right moment to capture a perfect representation of his sitter. Perhaps most significantly, Beaton’s royal portraits were among the most widely published photographs of the 20th century.

To mark the Queen’s Diamond Jubilee, London’s Victoria and Albert Museum is featuring around 100 of Beaton’s royal portraits, ranging from the wartime photographs of a young Princess Elizabeth to the official photographs of the Queen that firmly place her in her role as Britain’s monarch. As well as these royal images, the exhibition also features several portraits of Beaton taken by such photographers as Curtis Moffat, Irving Penn and David Bailey.

The V&A’s exhibition takes 1939 as its starting point, the year that Beaton was asked to visit Buckingham Palace and photograph King George VI and the Queen Consort (later the Queen Mother). The fact that Beaton was asked to work with the royals came as no real surprise. By the time the invitation arrived, Beaton was already established as the number-one photographer in the country.

‘Beaton had been shooting for *Vogue* for around a decade,’ says Susanna Brown,

curator of photographs at the V&A. ‘He’d photographed some of the biggest names in Hollywood and some of the world’s most important artists, such as Picasso and Dali. The King and Queen would have been aware of some of the previous work that he’d done with their family. For example, he’d taken some shots of the Duke and Duchess of Kent. That’s not to say it wasn’t a shock to Beaton, especially considering he was only given a day’s notice for that first sitting. You can read all about that first experience in his diaries, which are on show at the exhibition.’

BUILDING THE IMAGE

It’s fair to say that visual imagery can play a large part in how a person of authority is perceived. This is just as true in the case of Queen Elizabeth. Beaton’s images have in many ways led the public’s perception of the Queen as a regal figure.

‘A lot of these images existed in the pre-television age,’ says Susanna. ‘Photography was the primary means by which the public would see images of the royal family. That, of course, wasn’t limited to Britain. During the Second World War these images were published far and wide, in places as far away as India and Australia. The thing to remember is that these were intended as press shots. They were very much about creating an air of regal authority. They helped enormously to boost the royal family’s PR in times of crisis. Additionally, they showed the royal family to be a solid unit. It was important for people to see that they stayed in London during the war. Their own home was hit nine times during the Blitz.’

Beaton’s relationship with the Queen was unique. He knew her as a child and into her

PRESS IMAGES

Beaton often had to stick to strict instructions as to how his images should be used and when. 'It's important to remember that Beaton's work with the royal family was a collaboration,' says Susanna. 'He would send his best images from the day – sometimes around 40 pictures – and the palace would select around 20. They would become the official selection and Beaton was then allowed to send them out to the press.'

'The press was always eager for new shots of the royals, particularly during the war and when the children arrived. Quite often the embargo

dates, which were set by the family themselves, were ignored. These images were so important because it was the public's main access to the royals. It was a lot easier to control your images in the public domain then.'

It wasn't just the images of his sitters that Beaton was concerned with. On many occasions he found himself moving to the other side of the camera, where he was photographed by a number of his fellow photographers.

'Beaton had such a great character and a theatricality about him,' says Susanna. 'He was as comfortable in front of the cameras as he was behind it. He had a love of dressing up and had a real sense of style. It's always fascinating to see

how photographers work together and how they can mutually influence one another.'

'For example, Curtis Moffat photographed Beaton back in the 1920s [see image on page 33]. Then later you have the incredible image taken by Paul Tanqueray, where Beaton is plastered in photographs of himself. He's so proud and full of ego in that one. And the Penn shot is quintessential. By the time that shot was taken in 1950, Beaton was firmly established as a great photographer – and it shows. That shot really contrasts with the light-hearted images from David Bailey. It all goes to show that Beaton was a multi-faceted and fascinating individual.'

Far left: Queen Elizabeth II in coronation robes, 2 June 1953

Top right: Cecil Beaton photographs Queen Elizabeth II with a Rolleiflex, while assistants John Drysdale and Ray Harwood (right) prepare a 10x8in camera

Left: John Drysdale and Ray Harwood (right) preparing lighting on the day before the coronation

his own garden in Wiltshire and a variety of props. You can see at the various stages of his career that he's drawing on all sorts of sources of inspiration. His images are very closely linked to painted portraiture and people like Gainsborough and Winterhalter. Their influence is there.'

Later, Beaton became influenced by other photographers, such as David Bailey, which is something that is evident from the stripped-down aesthetic of his white backgrounds.

'Beaton wasn't chained to any particular aesthetic,' says Susanna. 'He was always so conscious of the fact that he needed to remain "with it". That was important, particularly in the 1960s when the new guard of photographers started appearing. He quickly became friends with some of the most significant figures of the '60s, people like Mick Jagger and Bailey. His fear of being seen as obsolete kept him going.'

CAMERAS AND LIGHTS

Interestingly, Beaton's anxiety of being seen as irrelevant didn't extend to his camera equipment as he was not exactly

a technically concerned image maker.

'Beaton was never interested in camera technology and purchasing the latest models,' says Susanna. 'He was always comfortable with his old Rolleiflex camera. When he started working for *Vogue* in the 1920s, he was still using his little folding pocket Kodak camera. The people at *Vogue* were actually quite disapproving of that. He was introduced to the Rolleiflex in the 1930s, which he took to almost immediately. That remained his standard camera for years.

'Technology was never important to him, Susanna adds. 'The technical side didn't concern him. I think in a way he thought it was beneath him as an artist to think about such things. For example, he would employ other people to manipulate the lights on his sets. His concern was with the vision.'

Many of Beaton's royal portraits were taken using full studio lights. As Beaton was in no position to ask the royals to come to him, he would essentially have to take the studio to them.

'All the pictures of the royals were taken at their homes, such as Buckingham Palace

and Windsor Castle,' says Susanna. 'There are some shots of his coronation set-up where you can clearly see the lights and cables (see above). It was a huge production. On the day of the coronation shoot he had a team of assistants, consisting of Patrick Matthews, who was head of *Vogue* studios, and Ray Harwood and John Drysdale. He needed this team of people because of the elaborate nature of his shots and lighting. He had about eight cameras there at once, including a 10x8, so someone would be reloading film and preparing plates while someone else would be seeing to the lights. Beaton even had his sister there to help on coronation day.

'The light that Beaton favoured for the royal portraits was a large 1,000-watt naked bulb on a height-adjustable stand,' continues Susanna. 'It's very simple, but very effective. He would place the stand behind the sitter with the bulb behind their head and this light would bleach out the central part of the backdrop. That would cause the head and face to stand out against the background and create a kind of halo effect.' **AP**

Queen Elizabeth II by Cecil Beaton, A Diamond Jubilee Celebration, is open until 22 April at the **Porter Gallery**, Victoria and Albert Museum, Cromwell Road, London SW7 2RL. Tel: 0207 942 2000. **Website:** www.vam.ac.uk. Open Sat-Thurs 10am-5.30pm, Fri 10am-10pm. Admission charges apply

The A16 24-85mm f3.5-5.5 APS-C lens mount unit

Features a 9-group, 11-element configuration, including three double sided aspherical elements (as well as high-refraction lens elements) designed to reduce various types of distortion across the entire zoom range. Additionally, the A16 has an iris diaphragm with nine rounded blades for a pleasing rendering of the out-of-focus areas. Other highlights include dynamic range compression, ISO bracketing, an improved two-axis electronic level gauge and two different manual focusing aids.

Lowepro Photo Sport 200AW

Designed for those who want a lightweight solution for carrying their equipment. The backpack features two compartments, one for gear the other for personal belongings. Capacity for a pro-sized DSLR with kit lens attached, flash, hydration reservoir (extra) plus clothing etc. The side pocket is gives quick access to your equipment. Available black or orange.
Photo Sport 200AW **£149.95**

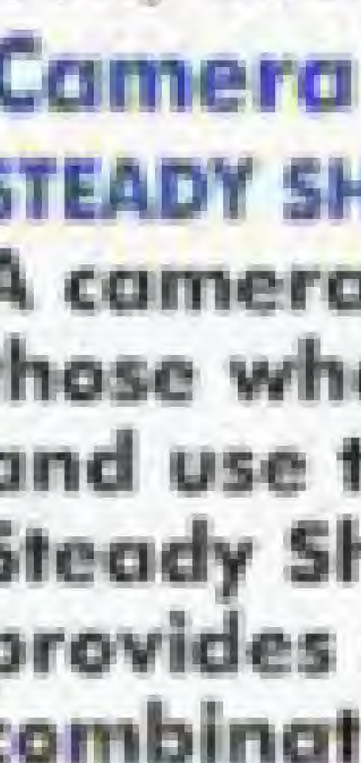

FREE UK mainland delivery on all orders over **£65**

NEW! Cotton Carrier System

CARRY LITE
This Camera Side Holster system allows you to keep a second camera on your Camera Vest, or remove and place independently on your trouser belt; or our new Lens Camera Bag System or Camera Waist Belt. Also includes 1 Regular Camera Hub & 1 Camera Tether.
Carry Lite **£130.00**

CAMERA VEST
A camera vest system that is perfect for all camera types and comes complete with a comfortable and durable, one size fits all adjustable Vest Unit made of 1680 Denier Polypropylene material fitted with a Lexan camera receptacle. As well as your camera holster, you will receive 1 Regular Camera Hub and 1 Angled Hub, each comprises an anodized flat aluminum hub, a stainless steel marine grade bolt, and a high density rubber washer.
Camera Vest **SAVE £7** **£132.95**

STEADY SHOT
A camera accessory intended for those who already own a Camera Vest and use their existing ballhead with the Steady Shot. The camera system provides support for a camera and lens combination DURING shooting.
Steady Shot **£240.00**
Side Holster **£55.95**
Camera Vest & Side Holder **SAVE £20** **£161.99**
Camera Vest & Steady Shot **£340.00**

Cokin H270A ND Filter Kit

Kit contains... consists of three ND plain filters that are used to reduce the amount of light reaching the sensor, without affecting the colour balance. Inc: P Series filter holder, ND2 (P152) filter, ND4 (P153) filter, ND8 (P154) filter, Cokin Brochure.
H270A ND Kit **£49.99**

Slik Pro 500DX Kit

Features Slik's Super Alloy "AMT" - a blend of Aluminium, Magnesium and Titanium for a strength to weight ratio some 40% greater than similar tripods. Multi position 26.8mm diameter legs allow low level shooting, and extra versatility on uneven ground. Each leg is covered with a foam grip, providing increased comfort, particularly in cold conditions. The centre column is simple to adjust - loosen the locking collar & move to the desired position. A friction collar is provided, allowing you to slow the movement when loaded with camera gear. The column is reversible, making this a great choice for macro photographers. Comes complete with 500DX all-metal head that has two pan handles to operate each movement axis independently. The head also incorporates a multi-position quick release plate for complete versatility. Max height column extended: 190cm. Max height column down: 152cm. Min height: 62cm (40cm with optional short column). Folded length: 76cm. Load capacity: 6kg. Weight: 3.5kg.

500DX Tripod & Head **£99.87**
400DX Tripod & Head **SAVE £20** **£69.95**
700DX & 800 Head **SAVE £125** **£139.95**

Cotton Carrier 2 camera vest system £169.99

www.intro2020.co.uk

THE COTTON Carrier vest system is made from hard-wearing polypropylene and provides quick access to camera kit. A camera attaches securely to the vest by sliding the plate that is fixed to the bottom of the camera into the metal slot and turning it 90°, ending with the lens facing down. It is a little fiddly to go from locked to shooting position, because at times the plate sticks in the slot and two hands are needed to twist it. A release catch would be quicker than a twist motion.

The vest must be tied tightly to the body for the system to be comfortable. Padding in the vest's chest and shoulders makes carrying two large DSLRs comfortable for a good hour, although heavy professional kit can become uncomfortable a little sooner. Included in the system is the vest, a side holster for the second camera, two plates, two angled plates for larger and heavier professional camera gear, two camera hand straps and a universal tripod plate adapter. This is an impressive array of kit for one system and good value. The vest is available in green and black and as a single camera version (£139.99) or just as the holster (£58).

Vanguard Nivello 245BK tripod £119.99

www.vanguardworld.co.uk

VANGUARD'S Nivello 245BK is the larger of two lightweight tripods in the Nivello range, and is designed to hold up to 3kg. Any camera up to a mid-level DSLR with compact zoom lens attached is well supported. Unlike the smaller Nivello 204BK tripod, the 245BK features a removable tripod plate, although both feature the same 360° pan and vertical tilt control.

The tripod's aluminium leg sections are relatively long and result in a folded height of 41cm, which is not the most compact for a tripod of this type. What this does mean is that its maximum height is approximately 160cm (with the two-section central column extended), which brings the camera to eye level. The quick fold central column can be reversed quickly, and is ideal for macro photography and packing the tripod away smaller. The leg sections can be locked and unlocked by twisting the foot of each leg for a quick set-up. Sadly, the leg locks can stick during set-up, which is frustrating, and the tripod is unlikely to withstand rigorous use. However, the Nivello 245BK should still meet the needs of the casual photographer.

A tripod packed with features, but not the most durable

FORTHCOMING TESTS In the next few weeks AP hopes to run the following equipment through the most rigorous testing procedures in the industry...

Olympus OM-D E-M5

It certainly has the looks, but it also packs a new 16-million-pixel sensor and EVF. We test the Olympus OM-D E-M5.

AP 7 April

Nikon D4

With its 16.2-million-pixel CMOS sensor and 10fps with autofocus, the D4 could be the best professional DSLR yet. We put it to the test.

AP 14 April

Sony Alpha 57

The Alpha 57 replaces the Alpha 55 as Sony's mid-level SLT, and has many features found on much more expensive models, such as 12fps shooting.

AP 14 April

Pentax K-01

Pentax's unconventionally styled 16.1-million-pixel K-01 is the first mirrorless camera to use Pentax's existing K mount.

AP 21 April

Panasonic Lumix DMC-TZ30

Panasonic's flagship travel compact is crammed with new features, including a 20x optical zoom Leica lens and touch LCD screen.

AP 21 April

PHOTOGRAPHIC SEMINAR SERIES

in association with Amateur Photographer, What Digital Camera, and the SPI

Tuesday
17 April 2012
6.30pm-8pm

BOOK NOW
LIMITED PLACES
AVAILABLE

BRETT HARKNESS

SOCIAL PHOTOGRAPHER

© BRETT HARKNESS

WE ARE delighted to announce that Brett Harkness, the highly acclaimed 'social photographer', will be giving an insight into his amazing photographic style as part of our photographic seminar series.

Brett will talk about his love of travel imagery and reveal the techniques that

make his wedding and social business run like clockwork. You can ask questions and find out what makes him tick in the crazy world of high-end weddings.

To be held at the home of *Amateur Photographer* and *What Digital Camera*, in the Blue Fin Building in London, 90 delegates

will be treated to an intimate one-and-a-half-hour seminar, including a Q&A session, followed by the chance to buy one of Brett's books at a book signing.

Tickets are sold on a first come, first served basis at £29.99 per head, and include the seminar, a glass of wine and a goody bag.

To be held at the Blue Fin Building, 110 Southwark Street, London SE1 0SU

HOW TO BOOK YOUR PLACE*

Call 0203 148 4326/21 to pay by card

EMAIL us at spiadmin@ipcmedia.com with the words 'BRETT HARKNESS SEMINAR' in the subject line. Please include your name, address and telephone number.

POST a cheque for £29.99, made payable to 'IPC Media Ltd', to Estelle Hicks-Bennett, SPI Seminar, Room 9-372, IPC Media, Blue Fin Building, 110 Southwark Street, London SE1 0SU. Please include your name, address, email and telephone number.

Fujifilm X-Pro1

With a hybrid viewfinder and a new colour filter array on its 16.3-million-pixel sensor, **Fujifilm's** highly anticipated **X-Pro1** compact system camera is more than just a pretty face

Richard Sibley
Technical writer

EVER since the Fujifilm X100 was announced in September 2010, many people suspected that it would form the basis for a potential Fujifilm compact system camera. After all, it made sense: the X100 uses an APS-C-sized imaging sensor, and it should theoretically be possible to remove its fixed lens and replace it with a lens mount. Such speculation was vindicated when Fuji announced the X-Pro1 in January this year.

Like the X100, the X-Pro1 retains the company's excellent hybrid digital and electronic viewfinder. However, although the X-Pro1 has clearly evolved from the X100, there are many differences, the most

obvious being the new Fujifilm X lens mount as the X100 had a fixed 23mm f/2 lens.

Another difference is the resolution of the APS-C-sized sensors used in each camera. The X100 has a 12.3-million-pixel sensor, while the X-Pro1 is equipped with a 16.3-million-pixel version. This X-Pro1 sensor also has a new colour filter array that helps to improve colour and reduce moiré patterning. For more on this, see *Features in use* on page 44.

With the X100 being very highly regarded by photography enthusiasts, I was eager to see how the X-Pro1 compared. Can it compete with other APS-C-format compact system cameras already on the market, or even Leica's M9 digital rangefinder camera and system?

FEATURES

At the heart of the Fujifilm X-Pro1 is its APS-C-sized, 16.3-million-pixel X-Trans

AT A GLANCE

- 16.3-million pixel X-Trans CMOS sensor
- New colour filter array
- No low-pass filter
- ISO 100-25,600
- Built-in hotshoe
- Hybrid viewfinder
- Street price £1,429 (body only)

CMOS sensor. However, it is the sensor's new colour filter array and lack of a low-pass filter that are the most interesting aspects of its specification. I'll go into this in more detail later, but briefly the new colour filter array has a different pattern to the regular Bayer version used in most digital cameras. It looks more random and is said by Fujifilm to reduce moiré patterning, removing the need for a low-pass filter. This, in turn, is said to improve the sharpness of images.

The sensor has an equivalent sensitivity range of ISO 200-6400, with an extended range of ISO 100-25,600. The most sensitive extension is a 1EV increase from the ISO 12,800 setting found in the X100. However, these extended settings are only available when shooting JPEG images.

Ultra Sonic Vibration is used to rid the sensor of dust, but the camera doesn't offer image stabilisation. The lens road map for the X mount shows that Fujifilm plans to introduce optically stabilised lenses, the first of which we are told will be an 18-72mm f/4 IS zoom, due for release later this year.

At its launch, the X-Pro1 was introduced with three lenses – a Fujinon XF 18mm f/2, an XF 35mm f/1.4 and an XF 60mm f/2.4 Macro – and I was fortunate to have all three available to me for this test. The introduction of the zoom lens to the existing range should provide all the basic focal lengths required by travel and street photographers.

➔ In addition to this, there are five more Fujinon lenses listed as in development: a 14mm f/2.8, a 28mm f/2.8 pancake, a 23mm f/2, 72-200mm f/4 IS and a 12-24mm f/4 IS. All these lenses are due for release in 2013, except the 14mm optic, which is due out later this year.

One of the advantages of compact system cameras is that the short flange depth allows many other lenses to be mounted and used, via a mount adapter. Measuring just 17.7mm, the Fujifilm X mount actually has one of the shortest flange depths of any system camera. It is fractionally shorter than the 18mm depth of the Sony E mount used on the NEX models, and more importantly for many, it is more than 10mm shorter than the 27.8mm depth of the Leica M mount. Fuji has already shown a prototype of a Leica M-to-X-mount adapter at the recent CP+ show in Japan, and it should be released this year. Novoflex has also announced that it will be making lens mount

adapters for the X-Pro1, presumably in all the standard lens mounts, including Nikon F, Leica M and Pentax K.

Having the option to use Leica lenses on a classic rangefinder-styled camera will delight many Leica film camera owners, as well as potentially saving them a fortune. The Leica M9 costs around £5,000, while the X-Pro1 comes in at around £1,400 body only.

Like the X100, the X-Pro1 uses a hybrid multi-viewfinder, which combines an optical viewfinder with a digital display. At the flick of a switch on the front of the camera, this optical finder is replaced with an electronic view, so users get the best of both analogue and digital worlds.

Other interesting features of the X-Pro1 include exposure bracketing, ISO, dynamic range and film simulation bracketing. The latter allows three different film simulation colour styles to be selected and saves three different images when a picture is taken.

Continuous shooting is available at either

3fps or 6fps, whether shooting JPEG or raw image files, although the focus is locked at the first frame. I found I was able to take one raw and JPEG image before the shooting rate slowed. After a few more shots the buffer fills and it takes a few seconds before shooting can continue at the full 6fps. Dropping to 3fps didn't change much, although I was able to shoot 12 raw frames before the shooting rate slowed right down. Switching to JPEG made an obvious difference and I was able to shoot around 23 images at 6fps before the buffer became full. Dropping to 3fps allows nearly 40 JPEG images to be taken before the buffer fills and the shooting rate drops.

The feature set of the X-Pro1 is as comprehensive as a serious photographer would want, but without being bloated with facilities that will never be used. Many photographers will simply set the camera up with a suitable image style, or set it to raw for later adjustments, and then use the camera as a traditional rangefinder, forgetting about the bells and whistles.

8/10

BUILD AND HANDLING

The Fujifilm X-Pro1's resemblance to a classic rangefinder lends it a reassuring familiarity. It is larger than other compact system cameras, yet it feels comfortable to hold, with no small fiddly buttons. It is clear that it was never intended to compete for the title of 'world's smallest system camera', but is instead meant to be much more of a workhorse built for ease of use and quick handling.

Fuji's decision to include an aperture ring on all its X-mount lenses is a great one. Combined with a labelled shutter speed selection dial, a separate exposure compensation dial and, of course, the hybrid viewfinder, the X-Pro1 feels, for want of a better term, like a 'proper' camera.

When I first picked up the X-Pro1, I was taken aback by how light it is. As it looked like an old rangefinder, I expected it to be a rather solid lump of metal, but its magnesium-alloy top-plate provides strength without the weight. In fact, at just 450g including battery and memory card, the X-Pro1 is more than 160g lighter than the Leica M7 and 143g lighter than the M9.

As well as adding to the classic charm, the faux leather finish of the body allows the X-Pro1 to be comfortably gripped. However, as easy as the nostalgic references make it to forget, the X-Pro1 is still a digital camera with all the associated settings.

For instance, there are a lot of options in the camera's menu system, which can make it a little daunting when deciding exactly how images are to appear. I shoot raw and JPEG as much as possible and aim to get the JPEG as close as I can to perfect. It was only for the occasional awkward scene that I had to delve into the menu to change the white balance or switch the metering.

Thankfully, there is an excellent Quick Menu button on the back of the camera, which displays all the shooting and image

1 Lens 2 Sensor

FEATURES IN USE X-TRANS CMOS SENSOR

FUJIFILM'S pride in its film heritage is clear from its use of film names to represent the different image colour settings. The company's marketing material for the X-Pro1 even claims that the camera's new X-Trans CMOS sensor was 'inspired by film'.

Most digital cameras use a Bayer pattern array (pictured above left), which contains two green filters for every red and blue filter. However, this very obvious repeating pattern can be the source of moiré patterning.

Fujifilm has changed the pattern of the colour filter array in the new X-Trans sensor so that it uses a 6x6 pattern, featuring 2.5 green filters for every red and blue filter. Each horizontal and vertical series on this new sensor array contains an RGB

photosite, which helps colour reproduction and reduces the occurrence of false colours. The array also has a far less obvious repeating pattern, which means moiré patterning is reduced.

Moiré is typically avoided in Bayer pattern sensors by using an optical low-pass filter. This sits in front of the sensor in the path of the light. The problem, though, is that a low-pass filter can also reduce image resolution. To retain a high level of detail resolution, therefore, the sensor of the X-Pro1 does not have a low-pass filter fitted.

Fujifilm isn't the first manufacturer to do this. Leica removed the low-pass filter altogether in its M9 digital rangefinder and, more recently, Nikon has fitted its D800E with a second low-pass filter that actually cancels out the effects of the first.

The amount of fine detail that can be captured is staggering for a sensor with 16.3 million pixels. This image is a from a converted raw file

settings, and makes quick changes possible for the most regularly used modes.

Most other options have their own dedicated settings. The drive mode button allows access to all the bracketing choices, as well as basic single or continuous shooting modes, and there are metering and AF buttons, too. All that is missing is an ISO sensitivity button, but this can be set to the Fn button on the top-plate.

My impression of the X-Pro1 is one of great design. Of course, it can never fully be as simple to use as a film rangefinder, but the direct exposure controls and viewfinder display do capture some of that experience, which is something that most other compact system cameras have failed to do.

8/10

METERING

I have few complaints about the 256-zone evaluative metering of the X-Pro1. Generally, images are well exposed and the few times I did need to tweak the given exposure I could do so using the exposure compensation dial, without having to take my eye away from the viewfinder. A half-press of the shutter button shows a preview of the exposure and depth of field, so it is easy to assess the scene quickly and make any changes before the image is taken. This is one of the advantages of using the electronic viewfinder.

For more complicated scenes, such as metering for highlights in a particularly strong sunset, I opted to use the X-Pro1's spot metering option. However, I found that the often-overlooked average metering was one of my favourite methods. I say this because it is predictable, making it easy to compensate for an 'incorrect' metered exposure. It is also easy in this mode to tilt the camera upwards to expose for the sky, and then lock the exposure and recompose.

As I stated previously, the direct shutter speed and exposure compensation dials,

combined with the lens aperture ring, make it easy to alter exposure quickly. However, the multi-metering setting rarely needed more than a slight $\pm 0.6\text{EV}$ adjustment.

8/10

WHITE BALANCE AND COLOUR

Those familiar with Fujifilm's professional range of digital cameras will know that the

There is a choice of in-camera black & white styles. This image was taken with the red filter effect

company names its image colour settings after its range of films. The standard colour setting is inspired by Fujifilm Provia, while Velvia and Astia provide the models for the vivid and soft styles respectively.

The X-Pro1 also introduces two new film modes: Pro Neg Standard and Pro Neg Hi. These replicate the look of colour negative films, with the Hi version having increased colour and contrast. Of these colour settings, I mostly used Velvia and Pro Neg Hi. They provide punchy images with good contrast and colour. However, the Astia mode is great for just taking the edge off an already high-contrast scene.

While most cameras allow the individual colour settings to be adjusted to taste, Fuji has adopted a more universal approach for the X-Pro1. In the shooting menu are highlight and shadow contrast adjustments, which alter the contrast curve to produce softer or harder shadows and highlights. I found myself making the shadows slightly harder, while setting the highlights to be softer. This produces a good level of contrast, while helping to keep some subtle detail in highlights.

Monochrome enthusiasts have not been forgotten and there are four different black & white modes, including standard and red, yellow and green filter modes. Sepia tone is also available.

In terms of colour reproduction, the X-Pro1 is excellent, and colours look realistic no matter which film simulation mode is set. One of the most important subjects that require successful reproduction is the sky, and the X-Pro1 renders blue sky very well, without the hint of cyan that is apparent in some other cameras.

When shooting outside, I rarely had to take the camera out of its auto white balance mode. Indoors, AWB leaves a hint of colour from domestic tungsten lights, taking the edge off the amber hue without removing it completely. Switching to incandescent white balance removes all the amber hue, producing a clean, neutral image.

Overall, the colours produced by the X-Pro1 are superb, and combined with the contrast and dynamic range options it is possible to produce great JPEG files straight from the camera. In fact, if I were to own a X-Pro1 myself, I would probably shoot raw + JPEG, and use the raw images as archive files. The vast majority of the time I would be perfectly happy with results straight from the camera, which is testament to the colour and sharpness of the images produced.

9/10

DYNAMIC RANGE

In high-contrast landscapes, I found there is still a lot of highlight detail that can be recovered from raw images, although I tend to underexpose and lighten shadow detail post-capture using software. Thankfully, noise is controlled well enough at low ISO sensitivities that this underexposure and lightening are

possible without introducing too much luminance or colour noise. The camera has dynamic range optimisation built in, and this uses an increased ISO sensitivity to ensure that highlights aren't burnt out before lightening shadow detail. In most circumstances the effect is quite subtle, and again, if you are shooting JPEG images, it can save a lot of editing in post-production.

While not directly affecting the dynamic range of the camera, the highlight and shadow contrast options should be mentioned here. They are simple contrast curve adjustments, but are particularly useful if the highlight strength is reduced, in combination with the dynamic range optimiser, to make sure that highlight detail is maximised in JPEG images.

8/10

NOISE, RESOLUTION AND SENSITIVITY

We have tested numerous cameras with 16.3-million-pixel sensors, and the Fujifilm X-Pro1 is among the best. This camera can record a staggering amount of detail, as can be seen in our test chart resolution images (right), and it clearly benefits from the lack of low-pass filter. When viewing the very tip of the test chart, it looks like the camera can resolve all the lines, but closer inspection reveals that while there are indeed some solid lines visible, there are just five instead of nine. That said, there is still an impression of detail where there would just be a blur when photographed with other cameras. In fact, when the X-Pro1 is combined with the 60mm macro lens, the detail resolution is on a par with an 18-million-pixel camera.

Noise is well controlled in JPEG images. At ISO 6400 there is a hint of luminance noise, but the X-Pro1 is as good as, if not better than, most other 16-million-pixel models. Colour noise is virtually non-existent at all ISO settings, although there is a decrease in colour saturation that would suggest a fair amount of colour noise removal has taken place.

The raw files obviously show more luminance and colour noise, but this is easy to reduce. Tweaking the contrast and sharpness of raw files reveals even more detail, and the 16.3-million-pixel sensor produces some of the most detailed images we have seen from an APS-C-sized unit.

29/30

AUTOFOCUS

The best way to describe the contrast-detection AF of the X-Pro1 would be 'steady' rather than 'snappy'. For instance, when using the 60mm and 35mm lenses, the camera's AF motors can be heard whirring before it locks into focus. The 18mm optic is faster. However, while hardly gazelle-like, the X-Pro1's focusing speed should be good enough for the type of subjects and situations for which the camera is most likely to be used. After all, it isn't designed for sports photographers.

Facts & figures

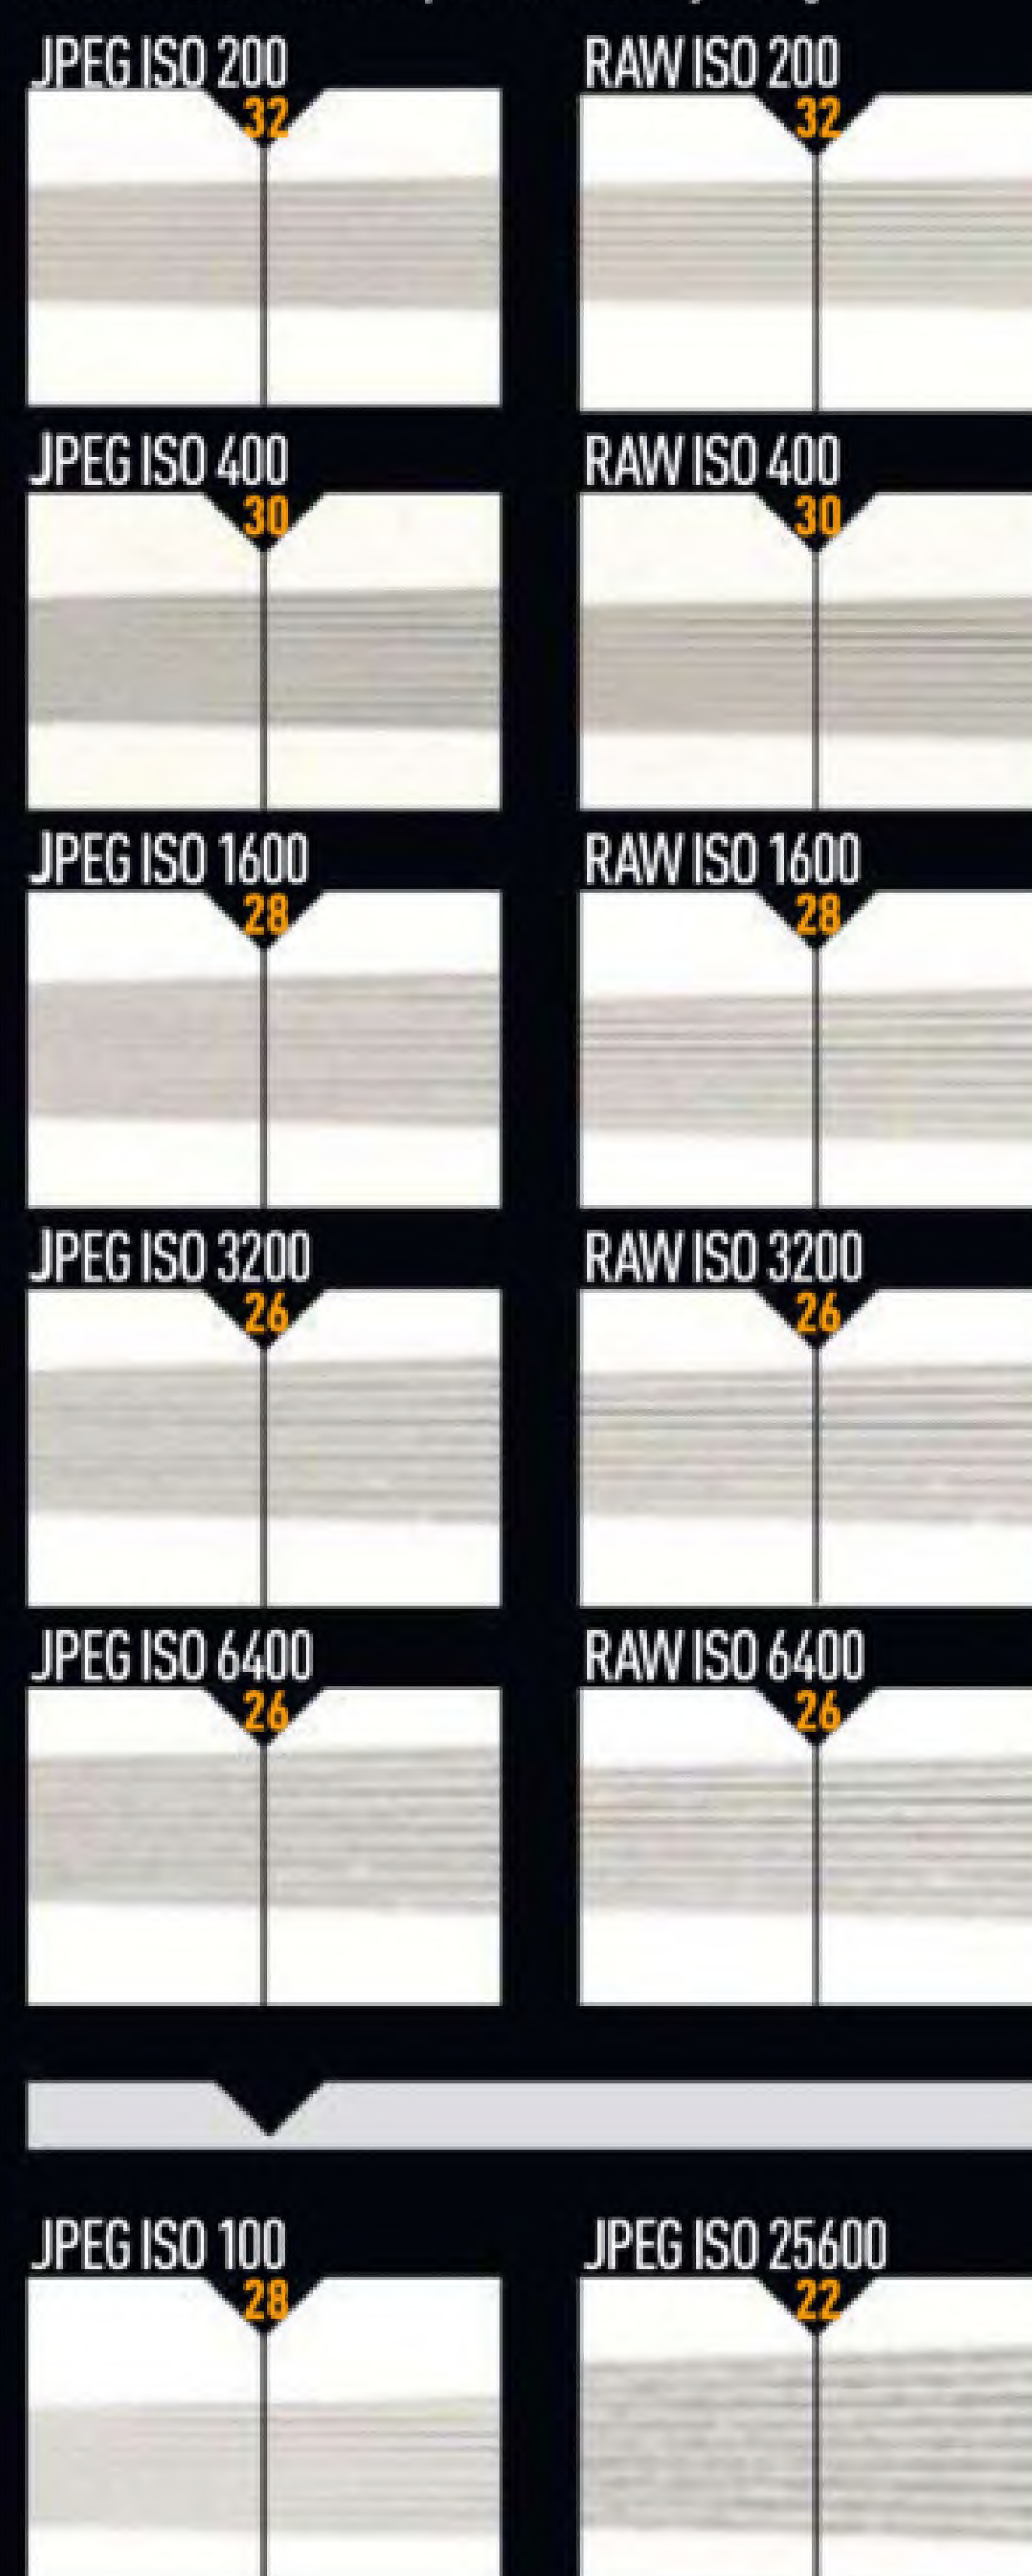

RRP	£1,429 (body only)
Sensor	16.3-million-effective-pixel X-Trans CMOS
Output size	4896x3264 pixels
Lens Mount	Fujifilm X mount
File format	JPEG, RAF (raw), MOV
Compression	2-stage JPEG
Colour space	Adobe RGB, sRGB
Shutter type	Focal plane shutter
Shutter speeds	30-1/4000sec, plus bulb (max 60mins)
Max flash sync	N/A
ISO	200-6400 (100-25,600 expanded)
Exposure modes	Program, aperture priority, shutter priority, manual
Metering system	256-zone TTL, multi, spot, average
Exposure comp	±2EV
White balance	Auto, 7 presets, custom, manual, WB shift
White balance bracket	N/A
Drive mode	3-6fps
LCD	3in, 1.23-million-dot RGBW
Viewfinder type	Hybrid optical/electronic viewfinder
Field of view	90% optical/100% electronic
Dioptr adjustment	No
Focusing modes	Single, continuous, manual
AF points	49-point system (contrast-detection-based)
DoF preview	Yes (via EVF)
Built-in flash	No
Video	1920x1080 pixels, 24fps, MOV (H.264)
External mic	No
Memory card	SD, SDHC, SDXC
Power	Rechargeable NP-W126 Li-Ion
Connectivity	USB 2.0, HDMI
Weight	400g (excluding battery and memory card)
Dimensions	139.5x81.8x42.5mm

FUJIFILM, Unit 10A, St Martins Business Centre, St Martins Way, Bedfordshire MK42 0LF. Tel: 01234 572 000. Website: www.fujifilm.co.uk

RESOLUTION & NOISE

These images show 72ppi (100% on a computer screen) sections of images of a resolution chart, captured using a Fujinon XF 60mm f/2.4 Macro lens. We show the section of the resolution chart where the camera starts to fail to reproduce the lines separately. The higher the number visible in these images, the better the camera's detail resolution is at the specified sensitivity setting.

Above: The ISO 100 and 25,600 extended settings are included at the bottom here as they are only available as JPEG images and not as raw files

A superb amount of detail can be captured, but purple fringing is visible in the corner of both raw and JPEG images shot with the 18mm lens

FOCAL POINTS

Hotshoe

The X-Pro1 features a dedicated hotshoe that is compatible with Fujifilm's EF-42, EF-20 and EF-X20 flashguns

EV dial

Conveniently located on the camera's top-plate, the EV dial allows exposures to be quickly adjusted

Eye sensor

This sensor turns on the electronic overlay, or electronic viewfinder, when the camera is held to the eye

Quick menu

This button displays a menu of all the exposure and image settings

Camera shown actual size

RGBW screen array

The LCD screen features an RGBW array, meaning that as well as red, green and blue dots, it also has white ones. These extra white dots aid colour rendition and brightness.

Battery life

Although the white dots on the LCD screen make the screen brighter, they consume less power. In power save mode, using the optical viewfinder, Fujifilm claims that 1,000 shots are possible on a single charge.

In-camera raw conversion

It is possible to preview how an image will look with settings such as aperture, shutter speed and dynamic range optimiser applied – on-screen and in the viewfinder.

Shutter lag

Fujifilm claims just a 0.05sec shutter lag, even when shooting using the EVF.

Info screen

ISO menu

Film simulation menu

Of all the colour styles, the vivid colour of Velvia produces the most pleasing images

When most cameras are set to continuous AF mode, the focusing starts as the shutter button is half depressed. However, the X-Pro1 is a little different. When set to continuous AF the lens is continuously focusing, and a half-press of the shutter actually locks the focus point. The system works well and becomes very intuitive.

Manual focusing is also available with both the electronic and optical viewfinder modes. Here it is important to note that the focusing is electronic, with the ring simply driving a motor that moves the lens optics, rather than the focusing barrel moving them itself. There has been a lot of internet chatter about this, but while I would prefer a direct physical lens barrel for focusing, I found that the electronic focusing was fast and response, particularly given the types of scenes that people will typically be photographing while focusing manually.

When focusing manually using the optical viewfinder, it relies on a rangefinder scale at the bottom of the finder. This gives the current focus distance, along with a bar indicating the depth of field. You do not see changes to the lens focus through the optical viewfinder. Switch to the electronic viewfinder, though, and it is easy to see the changes in focus. There is also an enlarged option to ensure that fine detail is in focus, and once again it is easy to switch in and out of this mode without removing the eye from the viewfinder. Usefully, there is also a one-shot AF option, which focuses the camera with a single press, effectively overriding the manual focus.

7/10

VIEWFINDER, LCD AND LIVE VIEW

As already discussed, the hybrid viewfinder allows images to be composed using either the 1.44-million-dot EVF or the optical view.

When using the optical viewfinder a wealth of information can be overlaid, including gridlines and all the shooting and AF information. This makes the optical viewfinder an extremely useful tool, and perfect for using in bright sunlight.

As the optical viewfinder is offset, the lens can often be seen in the bottom-right corner of the frame. A white digital image frame is overlaid on the optical image, and it changes in size depending on the lens currently in use. The viewfinder also has a 0.6x magnifier, which slides into place when a telephoto lens is used. This makes sure that the digital image frame doesn't become just a tiny square in the centre of the optical viewfinder when longer focal lengths are used.

The digital overlay also has an advantage in that it allows the photographer to see exactly what is going on outside the image frame. This is very useful if you wish to time a shot of something entering the frame perfectly.

The X-Pro1 EVF is also excellent. It is bright and detailed, plus it has the added advantage of allowing a magnified view to be shown for even more precise focusing. However, there is a slight lag in the display when locking the autofocus.

The 3in, 1.23-million-dot screen is very detailed and perfect for reviewing images, but I prefer holding a camera up to the eye where possible.

Video capture in the X-Pro1 is something of an afterthought, and although it is capable of recording HD video at a resolution of 1920x1080 pixels at 24fps, I doubt it will be more than a handy addition for most photographers.

Overall, with the choice of an optical or electronic viewfinder and a live view screen, the X-Pro1 gives photographers a lot of freedom when composing their images.

9/10

Competition

Leica M9

TESTED AP 24 OCTOBER 2009

Sony NEX-7

TESTED AP 19 NOVEMBER 2011

LOGICALLY, the Fujifilm X-Pro1's main competitor will be the Leica M9. The Fujifilm camera has all the retro looks and image quality to match the Leica, but is £3,600 cheaper. With the Leica mount adapter due out later this year, I'm sure there will be more than a few owners of a Leica M-series film camera buying a Fujifilm X-Pro1 to make use of their Leica glass.

Sony's NEX-7 may also offer some competition. It has a higher resolution of 24 million pixels, and is physically smaller. It also has a lot of direct controls for exposure settings, and a 2.4-million-dot electronic viewfinder. The camera is around £1,100, including kit lens, so is about £300 cheaper than the X-Pro1 body only.

Verdict

I HAD high hopes for the Fujifilm X-Pro1 when it was announced and, having tested it, I am pleased to say that I am not disappointed. Like the company's own X100, the X-Pro1 does have its quirks, and aspects such as AF speed could be improved, but it handles extremely well and is a pleasure to use. In fact, the main strength of the X-Pro1 has to be its combination of easy handling and the amount of detail it can resolve.

The X-Pro1 has a sense of the familiar. It may not have all the scene modes or creative picture styles of other digital cameras, but it doesn't need them. It is a camera that has clearly been designed with a particular type of photographer in mind, and Fujifilm has done an excellent job of meeting their demands. The amount of in-camera control over the colour and contrast settings is excellent, although it is the hybrid viewfinder system that many photographers will love and really benefit from.

For anyone looking for a compact system camera, but who is put off by the compact camera-style build and handling of many other models available, the Fujifilm X-Pro1 could be the camera they have been waiting for – and it will save them the extra £3,600 required for a Leica M9.

Marumi Super DHG filters are manufactured in Japan to a high specification using lead free materials. Specifically designed with digital photography in mind, each filter uses a specially developed ultra-low reflection coating to minimise internal reflection off the camera's built in CCD and CMOS sensors.

The newly developed Digital Super Coating protects the lens surface from scratches and dirt and is also oil and water repellant. The filters are in a special slim frame with satin smooth finish and a black ink process on the glass edge to eliminate flare.

Marumi Super DHG filters are available in a full range of sizes from 37mm up to 82mm.

For further technical information please visit www.kenro.co.uk

Marumi Super DHG Circular Polarising Filter

High spec, well made, smooth and light operating, with strong performance, adds up to a good package for a competitive price.

Tiffen variable neutral density filter

Tim Coleman tests Tiffen's variable ND filter that offers a light reduction of 2EV to 8EV in one unit

A NEUTRAL density (ND) filter reduces the level of light that enters a lens. A variable ND filter is a useful tool because it effectively combines a number of these filters into one unit, where normally several ND filters would be necessary to achieve the same degree of exposure control. The variance of optical density is typically measured by the EV reduction it causes, and is achieved by rotating the outer of two polarising glass sheets. In this sense, the filter works in the same way as a circular polariser.

While there is a current trend to use ND filters to achieve slower shutter speeds in order to blur movement, such as that of flowing water, they can also be used for depth of field control. Whatever the desired effect, an ND filter is a great tool, especially in daylight conditions, because the effects are very difficult to recreate convincingly

'An ND filter is a great tool, especially in daylight conditions, because the effects are difficult to recreate convincingly post-capture using software'

post-capture using image-editing software.

Tiffen's variable ND filter offers light reduction from ND 0.6 (2EV) to ND 2.4 (8EV). For example, when using the filter for an exposure reading of 1/250sec at f/22, the ND 0.6 (2EV) reduction will give an equivalent exposure to 1/60sec at f/22 or 1/250sec at f/11. For the same original exposure, the ND 2.4 (8EV) setting will be equivalent to 1sec at f/22 or 1/250sec at f/1.4.

IN USE

For quick and accurate focusing, a camera works best with the highest level of available light. When using a variable filter, focusing is easier when the filter is set to its minimum setting, which is indicated on the rim. Once focus is achieved, switching to manual focus and adjusting the filter to the desired EV reduction is the quickest and most accurate way of using it. Markings on the Tiffen filter rim display the eight steps from the minimum to the maximum settings. However, the company states that these steps are for guidance only – to return to a previous setting, for example – and do not indicate exact 1EV steps.

Generally, the camera's internal exposure meter is accurate when the filter is mounted on the front of the lens. However, at times I found the exposure meter struggled

to keep up if the setting of the filter is rotated quickly. As with any exposure, it is important to check that the results are accurate, or use the histogram as an indicator.

It is possible to push the filter beyond its 8EV reduction, but this is not advised. When doing so, a black X shape

appears across the frame – an unavoidable occurrence that is down to the law of physics when combining two polarising filters. The X shape appears even sooner than the 8EV reduction setting when a wideangle lens is used. For example, with the 12–24mm f/4G ED-IF AF-S DX Zoom-Nikkor lens at its widest setting (18mm effective), the first signs of the X shape appear in the frame at 5EV, in the form of substantial diagonal vignetting in two corners. By 7EV, the X shape has fully manifested and images are unusable. At 30mm and 36mm (effective), the first signs are at around 6–7EV, although the X shape only appears just beyond 8EV. Wideangle users, therefore, will not get the most out of this filter.

To ensure reduced vignetting when used with ultra-wideangle lenses, the filter's ring has a thin 10mm profile and a wider outer rim. When used with a Nikkor 12–24mm lens at its widest setting, there are no signs of cut-off. Due to the wider outer rim, however, the lens cap will not clip back on with the filter attached. Removing the filter every time camera kit is packed away may become tiresome for those who use the filter a lot. However, a well-padded pouch is included with the filter for safe storage, and the pouch features a cloth for cleaning it.

PERFORMANCE

Combining two sheets of glass in front of the lens means that a variable ND filter is likely to compromise image sharpness. Fortunately, unlike some other less expensive filters, Tiffen's offering uses excellent-quality glass featuring ColorCore technology. I was able to test the filter using lenses with focal lengths ranging all the way from 18mm to 300mm, and found there is no discernible difference in image clarity.

With the filter attached there is a slight shift in colour temperature. In the sunny conditions of the white-water rafting images (see opposite), the sunny white balance preset gives a temperature of 5,500K. With the filter attached, the colour rendition is a little warmer at around 6,200K. I found anywhere up to a 1,000K difference, depending on the conditions and the setting of the camera and filter. Using auto white balance in-camera helps to reduce the difference in temperature, although the temperature shift is affected the greater the EV reduction that is applied. For example, the same scene using AWB came up with 5,800K without the filter,

Without filter

2EV

8EV

6,100K with the filter attached and set to its minimum 2EV setting, and 6,300K at the 8EV setting. Bearing all this in mind, a custom white balance reading should be taken for correct colours.

For any images taken without custom white balance, corrections can be made to the colour rendition using editing software, such as Adobe Camera Raw or Photoshop. The simple process involves either adjusting the temperature slider or using the Color Picker tool and clicking on a neutral grey reference in the scene. **AP**

On a bright sunny day, the 8EV reduction (above) gives an exposure of 0.5sec at f/11 at ISO 100, which is enough to blur the water, whereas without the filter (top left) it is 1/250sec at f/11

Verdict

TIFFEN'S variable ND filter is well constructed, and the good-quality glass does not compromise image sharpness. In use, the camera's exposure meter can be fooled with the filter attached,

and there is a slight shift in colour temperature, so a custom white balance should be used. Wideangle users who use 7EV light reduction and higher, are better served by a fixed ND filter that is not affected by the black X shape. Otherwise, the filter is a very handy tool.

Tiffen's variable ND filter comes with a ten-year warranty and is available in filter sizes ranging from 52-82mm, excluding 55mm. The 77mm filter is available now, while all other sizes will be available in early April. Prices range from **£152 for the 52mm to £318 for the 82mm**. For more information visit www.tiffen.com

SOFTWARE RUNNING SLOWLY

Q I have bought a Sony Alpha 77 camera and upgraded from Photoshop Elements 5 to Elements 10 to use the raw converter. I loved using Elements 5, but I cannot say the same about Elements 10, as it runs incredibly slowly.

I have a Dell XP computer with 4GB of RAM installed and three external hard drives. The RAM allocated to Elements 10 has been increased to 100% (from 75%) and the scratch disk is now located on one of the external hard drives, which has 54% of free space. Efficiency percentage runs at between 95% and 100% (I get the occasional warning of high CPU usage), so where have I gone wrong? Adobe offers no suggestions on how to improve its performance, so I am hoping that you may have some advice. **Ron Smith**

A You don't mention which operating system you are using, but perhaps when you say you have a Dell XP computer you mean your Dell PC is running Windows XP. If so, this could be the problem – Elements 10 requires Windows 7, Vista or XP with Service Pack 3. If you are running XP but don't have Service Pack 3 installed, this might explain the poor performance. If you are running an appropriate operating system already, then it's a harder problem to diagnose.

You haven't provided details of your computer's processor, so this could be one possible answer – Adobe recommends a processor speed of at least 1.6 GHz to run Elements 10. This isn't particularly excessive, so I'd be surprised if that were the issue, but the fact that you sometimes get a 'high CPU usage' warning would indicate this is an area worth looking into.

Also, do you have plenty of space available on the external hard drive you're using as a scratch disk? Allocating the full 54% is great, but what's that in real terms – 54% of nothing is nothing! Maybe you could free up some space through a bit of file shuffling, although I doubt the scratch disk is the issue.

My final thought is that maybe you're running too many programs at the same time. It's easy to open multiple applications (email, internet, music player) and have them all run perfectly OK together, but image-editing software is processor intensive. If your computer system is already close to the

limit performance-wise, having other programs running may be enough to make Elements 10 underperform. Try running Elements on its own to remove this from the equation.

If the answer is 'none of the above', then it really would need someone to take a look at your computer – there are myriad possibilities here. My first recommendation would be to ensure you haven't picked up any viruses or malware, and then run system checks and disk defrag routines. It could well be that your computer just needs a virtual spring clean. **Chris Gatum**

Be it about modern technology, vintage equipment, photographic science or help with technique, here at AP we have the team that can help you. Simply email your questions to: apanswers@ipcmedia.com, via twitter @ap_answers or by post to: **Ask AP, Amateur Photographer Magazine, IPC Media, Blue Fin Building, 110 Southwark Street, London SE1 0SU.**

EXPRESS DELIVERY

Q I am new to digital photography and the software side is completely alien to me, so can you tell me which program I should choose? Would Adobe Lightroom 4, which was reviewed in AP 11 February, be suitable, or is there something else that is better for a beginner? **Frank Tatterton**

A It really depends on what you want to do with your images, but if image-editing software is totally new to you, I suggest you take a look at Photoshop Express before you spend any money. This is a free online editing program that will let you upload, edit and then save your images. It's by no means as sophisticated as Lightroom or Photoshop Elements, but it will enable you to make quite significant changes to your digital photographs. Not only that, but you will be getting hands-on experience of image-editing, which should give you an idea of what can be done to your images, and whether this is actually something you want to pursue. You can access Photoshop Express from any internet-enabled computer by visiting www.photoshop.com/tools.

AP GLOSSARY

PIXEL SIZE

Although the light-sensitive photosites (Ask AP, AP 24 March) on a digital camera sensor are microscopic, they are still measurable. The actual size of these is given in microns. You may wonder why it's important to know the size of a tiny part of a sensor, but it can be a great leveller when it comes to comparing digital cameras. The reason for this is because, generally, the bigger the photosites, the better the sensor is at capturing image-forming light.

For example, let's say you have two sensors that both contain 10 million pixels – one full-frame (36x24mm) and the other APS-C-sized (20.7x13.8mm).

To get 10 million photosites on an APS-C-sized sensor, they would have to be physically smaller than those on a full-frame sensor, which means they cannot hold as many photons before they become full. Conversely, the larger sensor, with its larger photosites, can accommodate a more photons. The upshot of this can often be reduced noise and a higher dynamic range.

Pixel size really comes into its own when examining cameras that have different resolutions to each other, and/or different sized sensors. If you know the pixel size, you can level the playing field and make an informed comparison.

book about 'steampunk'. When I asked if I might get a copy of the book when it is published, they replied, 'As the book will be priced at £25, we won't be able to afford to give too many copies away. If you would be willing to let us use anything anyway, please do let me know.'

I think it's a bit rich that they want to use pictures without paying anything at all, not even a copy of the book! Is there much of this sort of thing going on? Do publishers now use photo-sharing sites as a resource to avoid paying royalties?

David Flett, email

A Having worked in photography book publishing for the past five years or so, I can tell you that yes, publishers do look to Flickr and other photo-sharing sites for images, but it isn't necessarily a cynical attempt to avoid paying royalties. Indeed, it can be the exact opposite, as any fee that's

negotiated will go to the photographer in its entirety, rather than having a hefty slice removed by an image library.

Of course, some people are happy to have their work published in return for a copy of the book and a credit, rather than monetary reward, and I don't think you can accuse a publisher of being 'cheap' if that's what they offer initially – you can always negotiate, or simply decline if you don't agree with the terms.

However, I really am surprised by the behaviour of the publisher who contacted you. To point-black refuse a potential contributor a copy of a book is outrageous to start with, but to base their decision on the cover price is downright disgusting – the book will cost them no more than half that to get printed. The publishing company should be ashamed that it is unwilling to offer anything at all to use several of your images.

Chris Gatcum

opportunity for all involved to create a really diverse folio of photos. Does anyone have any ideas?

Geren replies I suggest you contact the relevant departments at your local college. If they run hair and make-up courses, and have a photography department, you may get some willing volunteers.

Alex1994 replies If I were you, I might be a bit concerned about finding someone through an online forum. I'm sure most of the contributors here are (relatively) normal, but you never know. You could search for local camera clubs, as I'm sure there'd be someone there pleased to help.

AndyTake2 replies Many photographers, models and make-up artists get a good deal out of TFP

(time for prints), myself included – it's a great way to extend your portfolio without shelling out lots of money.

Try registering on some of the relevant sites in order to get some offers, such as Net-Model (www.net-model.com), which is the one that I use, although there are several others. In their forums there are specific sections for make-up artists requesting TFP, plenty of models wanting a portfolio and the same with photographers. Just make sure you take a chaperone on your shoots – it may sound corny, but it's essential if you don't know someone.

P_Stoddart replies I think you should look at doing the photography yourself. You would get loads of support and help here, and second-hand kit can be picked up at a reasonable price.

Ivor Matanle recalls East Germany's last shot at the professional 35mm system SLR market

EAST German camera production during the 1950s and '60s was bedevilled by political and financial issues arising from post-war Soviet domination and economic interference. Much of the German camera industry prior to the Second World War had been located in what became, afterwards, East Germany, with key companies like Zeiss Ikon, Ihagee, KW, Balda, Welta, Kochmann and many others in or near Dresden, Meyer and Bentzin in Görlitz, and the mighty Carl Zeiss optical works in Jena.

Of the great German camera and lens manufacturers of the 1930s in what became West Germany, Franke and Heidecke (Rollei) and Voigtlander were in Braunschweig, Ernst Leitz (Leica) was in Wetzlar, Linhof was in

Munich, Schneider was in Kreuznach, Kodak/Nagel (the Retina factory) was in Stuttgart and Wirgin was in Wiesbaden.

Soviet demands for war reparations resulted in a large part of Zeiss Ikon's machinery and assets being seized from Dresden and summarily exported to the Soviet Union. Also, before the Iron Curtain finally closed in 1948, a large proportion of the scientists, designers and technicians from Zeiss Ikon and Carl Zeiss left East Germany and formed what became Zeiss Ikon in Stuttgart and a new Carl Zeiss in Oberkochen, West Germany.

Dresden was not only in a huge mess following the massive and controversial Allied air raid of February 1945, but also

became subject during the 1950s to Soviet nationalisation and reorganisation of the camera industry. Of the great pre-war names, Ihagee (Exakta) in Dresden, Carl Zeiss in Jena, Meyer and Bentzin (Primaflex) in Görlitz, plus Kochmann (Reflex Korelle) and KW (Kamera-Werkstätten Guthe & Thorsche), original manufacturers of Praktiflex, Praktica, Praktina and Praktisix/Pentacore Six cameras, remained as major contenders in world markets. This is, I accept, a major simplification, but it will serve for the purposes of this article.

By the end of the 1950s, world camera markets had moved on. Hasselblad in Sweden and the Rolleiflex cameras from West Germany dominated professional rollfilm photography, and Leica was losing ground to the dramatically successful Japanese Canon and Nikon rangefinder cameras, especially in the USA. From 1959, the new Nikon F single-lens reflex camera was making a major impression in both the Western European and US professional

Pentacon Super with 17-metre back

A Pentacon Super fitted with the 17-metre back, which allows about 250 exposures on one load, and the electric motor drive. The 55mm f/1.4 Pancolar lens is fitted with an original hood

WATCH OUT FOR

I have found no warnings of inherent problems in the Pentacon Super, so checking one over is a matter of looking for the usual suspects: sticking or sluggish automatic diaphragm; hesitant shutter operation, especially when using slow speeds; marks, fungus or damage to lens, prism or focusing screen; inoperative meter when a new battery is fitted; and flash sync not working. If the camera feels right, it probably is right

YOU MAY ALSO LIKE

If your intention is to use the Pentacon Super to take photographs, an Exakta Varex IIB has a similar specification but very different handling (and price). Perhaps more comparable, and also much less rare and less expensive, is a Nikon F2 with f/1.4 Nikkor lens (see above).

Meter pin

Removing the lens shows the projecting meter pin that moves in and out as the aperture is changed and bears on the metal plate in the lens throat. The conventional aperture-control pin of an M42 lens is visible close to the rear element

similar manner. As well as the combined microprism and split-image rangefinder screen that was supplied as standard in the camera, there was a range of four interchangeable focusing screens that met international standards at the time. Accessory right-angle finders to screw into the prism eyepiece were also in the range.

Aperture values were displayed at the top of the screen, via an optical system viewing the actual diaphragm-setting rim on the lens, in a similar way to that on a Bessamatic De Luxe or a Minolta SRT303. This feature, plus the need for the meter coupling pin to be able to use full-aperture TTL metering, limited the use of the general run of M42 lenses on the Pentacon Super, although any M42 lens could be used in stop-down metering mode and (in most cases) without the aperture display in the viewfinder.

The focal-plane shutter, with speeds of 1-1/2000sec on the normal shutter-speed dial under the wind lever, had a slow-speed mechanism in some respects similar to that of the Exakta SLRs. This was a clockwork mechanism, wound with reciprocating movements of a lift-up key on the base of the camera. With the 'fast' shutter-speed dial set to B, and the slow-speed dial around the key on the base of the camera set to whatever value was required between 2 and 10, firing the shutter provided an exposure of whatever number of seconds

Pentacon Super with 17-metre back

The Pentacon Super with 17-metre back and drive on its back with, in front of it, another camera showing the motor-drive pawl on the left and the slow-speed winding and setting assembly on the right

35mm camera markets. Two professional 35mm SLR ranges from East Germany had made considerable headway in the world's specialist professional scientific and laboratory photography markets: the Ihagee Exakta Varex and the KW Praktina ranges, both with Carl Zeiss and Meyer lenses. However, both, particularly the Praktinas, were losing ground to Japanese design, quality and optical innovation by the 1960s.

By the mid-1960s, KW had become part of Pentacon, its Praktina Ila, the last of the Praktina line, had been discontinued and the famous yet eccentric Exakta SLRs were simply outdated by ever-more successful designs from Nikon, Pentax, Minolta and Canon. East Germany no longer had a competitive professional SLR system camera to offer internationally. So the Pentacon designers got busy.

The result was the Pentacon Super, which was first marketed in October 1968. Made by the company that had so recently been spectacularly unsuccessful with the worst Praktica cameras ever, the Praktica Nova series, the Pentacon Super was a tough professional SLR with full-aperture TTL metering and advanced features. All it needed was somebody strong to use it, and more marketing investment and ability than Pentacon were able to provide to establish the new system camera in Western markets.

A SPECIFICATION TO DIE FOR

A prototype Pentacon Super had been shown at the Leipzig Fair in 1966, but some changes had been made by the time the camera was made available in the autumn of 1968. In the brief production period until this significant camera was taken off the market in 1972, only 4,579 were made, and the Pentacon Super is now scarce and much sought-after by collectors.

The Pentacon Super was the first East German SLR with full-aperture TTL exposure measurement, introducing a unique mechanical aperture simulator system that communicated the working aperture to which the diaphragm was set to the exposure meter, so that the meter could calculate the shutter speed required for a given shot. As the aperture ring on the lens was turned towards its minimum aperture, an additional pin on the specially produced M42 Pentacon Super lenses projected further against a partial circle of steel sprung plate in the lens throat, transmitting the aperture value to the camera. A match-needle readout in the prism viewfinder enabled the photographer to set the exposure.

The Pentacon Super had interchangeable viewfinders, the prism being removable by pressing two buttons on the rear of the prism simultaneously. A waist-level finder with a flip-up screen magnifier fitted in a

17-metre back

The 17-metre back replaces the normal camera back, which is easily removed with a sliding pin. Here you can see the large spools inside the 17-metre back. On the right is an instruction book for the Pentacon Super

'Enthusiasts in web forums have speculated that the fabric sections were there to make winding easier or faster'

the slow-speed dial was set to. If the 'fast' shutter-speed dial was set to a normal speed and the slow-speed dial was set to, say, 10, firing the shutter started a 10sec delay action run before the shutter fired.

The vertical-running focal-plane shutter was unusual, and possibly unique, in having metal blades that actually made the exposure with rubberised fabric sections either side of the metal blades. Enthusiasts in web forums have speculated that the fabric sections were there to make winding easier or faster. Whatever the reason for their presence, this is a feature that you will not find on any other camera to my knowledge.

Flash synchronisation was provided via a single 3mm PC socket, with a sliding switch on the side of the mirror box enabling the photographer to set X (electronic flash), F for slow-burning bulbs (contact made 12 milliseconds before exposure) or FP for focal-plane bulbs (contact made 20 milliseconds before exposure). Electronic flash could be used at speeds up to and including 1/125sec, but depending on the type of focal-plane bulb used, flash photography could be used at speeds up to 1/2000sec, according to the instruction book.

The Pentacon Super feels immensely solid, well-engineered and precise in operation, as well as being one of the

heaviest 35mm cameras you are likely to handle, weighing 1.32kg with 55mm f/1.4 Pancolar lens. The exterior finish of the two examples photographed for this article has lasted superbly well, and both work as they should, although the focusing screens are somewhat yellowed by modern standards.

In January 1969, Soviet cosmonaut Vladimir Shatalov, commander of Soyuz 4 on its historic mission to dock in space with Soyuz 5, used a Pentacon Super to take photographs in space. He and the camera became the first in history to return to earth in a different spacecraft to the one in which they had left. This was also the first occasion when a German camera was used in space.

LENSES

The camera instruction book says that lenses from 20mm to 1,000mm were available for the Pentacon Super, but it does not give more details. However, an internet site offers the following list, which does not get above 300mm: 20mm f/4 Zeiss Flektogon; 35mm f/2.8 Zeiss Flektogon; 50mm f/1.8 Zeiss Pancolar; 50mm f/2.8 Zeiss Tessar; 55mm f/1.4 Zeiss Pancolar; 75mm f/1.4 Zeiss Pancolar; 80mm f/2.8 Zeiss Biometar; 135mm f/3.5 Zeiss Sonnar; 180mm f/2.8 Zeiss Sonnar; and 300mm f/4 Zeiss Sonnar. I confess that I have not encountered any of these in Pentacon Super form, with the meter data pin.

HOW MUCH DO THEY COST?

The Pentacon Super is very scarce, only 4,579 of them having been made during the short production run. It was very expensive to buy when new, and collector Mike Otto in Germany has said that the price in East Germany was about 3,000 marks at a time when a secretary made about 300 marks per month. In 1999, an outfit consisting of a body, several lenses and the motor drive sold at Christie's in London for £345. On eBay as I write this, somebody in Warsaw, Poland, is offering a Pentacon Super with 55mm f/1.4 Pancolar lens, prism and ever-ready case at \$1,500 (around £950) 'Buy it now'. Someone else is selling an example of the motor drive with one bid of £113 and a day to go. My guess is that a realistic market price for the camera and 55mm f/1.4 lens in fully working order is around £750.

Waist-level finder

The waist-level finder replaces the prism – either is removed by simultaneously pressing the black buttons at each end of the rear of the finder. The ring under the wind crank is the main shutter-speed dial

180mm f/2.8 Sonnar

A rare 180mm f/2.8 Sonnar for the Pentacon Super, showing the two pins at the back, the upper of which is essential to full-aperture metering with the Pentacon Super

ACCESSORIES

This was a camera system specifically orientated to the professional market, so the range was launched with an electric motor drive and a 17-metre film back included from the outset. A bellows unit with double cable release for close-up photography using the automatic diaphragm was available, as were a viewfinder magnifier for precise focus, a right-angle viewfinder magnifier, an eyecup, an accessory shoe, various hoods and filters, and a table tripod. **AP**

PRINTER INK CARTRIDGES

EPSON

COMPATIBLE & ORIGINAL INK

At Premier Ink Supplies, we stock two types of cartridges for Epson printers - **Originals**, which are made by Epson, and **Compatibles**, which are made by a UK company called **Jet Tec**. Using **Jet Tec Compatibles** is a way of saving money, without compromising on the quality of your prints. Here're the results from two independent ink tests that agree...

"Jet Tec's colours were superb, with single greys and blacks very close to Epson ...so Jet Tec wins!"
- Total Digital Photography Magazine

"What we're looking at here is not only the best choice of ink for the R300 printer, but also the best ink in this group test, period. There's just no getting away from the superb combination of performance and pricing"
- Computer Upgrade Magazine

58mm 2.0X or 0.5X converter ~~£39.99~~

Neutral Density Filters

Used reduce the amount of light passing through the lens, reducing shutter speed without affecting colour contrast or balance. Available as ND4 (2 stop) and ND8 (3 stop).

52mm ND4 / ND8 ~~£11.99~~
55mm ND4 / ND8 ~~£12.99~~
58mm ND4 / ND8 ~~£14.99~~
62mm ND4 / ND8 ~~£17.99~~
67mm ND4 / ND8 ~~£22.99~~
72mm ND4 / ND8 ~~£29.99~~
77mm ND4 / ND8 ~~£34.99~~

More sizes in stock, from 37 to 82mm!

Starburst Filters

These add a dramatic star cross flare to bright light sources, such as streetlights. They also give a slight soft focus effect.

52mm Starburst x4/6/8, each ~~£11.99~~
58mm Starburst x4/6/8, each ~~£15.99~~
67mm Starburst x4/6/8, each ~~£21.99~~
72mm Starburst x4/6/8, each ~~£27.99~~

More sizes in stock, from 46 to 82mm!

We stock many other filter types, including multi-image, fog, split-field, red, orange, yellow and green filters in a range of sizes.

Light Craft Workshop
Filters

Amazing but true - by simply rotating the outer element of the filter, the amount of light passing through the filter can be adjusted from a 2 stop to an 8 stop reduction.

The FaderND filter is constructed from two opposing sheets of polarizing glass, the outer sheet mounted in an independently rotating frame. The new Mk II version features both improved optical elements, and a thinner, conical shaped frame to reduce the chance of vignetting. Also available is the highly acclaimed ND500MC fixed 9-stop filter with ultra-thin frame for wide angle photography.

Genuine LightCraftWorkshop filters - beware of imitations!

FaderND MkII (2-8 stop)

52mm FaderND MkII ~~£56.99~~
55mm FaderND MkII ~~£59.99~~
58mm FaderND MkII ~~£62.99~~
62mm FaderND MkII ~~£69.99~~
67mm FaderND MkII ~~£79.99~~
72mm FaderND MkII ~~£89.99~~
77mm FaderND MkII ~~£99.99~~

ND500MC (fixed 9 stop)

58mm ND500MC ~~£39.99~~
58mm ND500MC ~~£47.99~~
67mm ND500MC ~~£55.99~~
72mm ND500MC ~~£59.99~~
77mm ND500MC ~~£64.99~~

STEPPING RINGS

Step-Up and Step-Down Rings

Stepping rings are used to 'step-up' or 'step-down' from one filter thread size to another.

34-37mm 52-55mm 58-55mm 67-62mm
37-43mm 52-58mm 58-62mm 67-77mm
43-46mm 55-52mm 58-67mm 72-67mm
46-49mm 55-58mm 62-67mm 72-77mm
49-52mm 58-52mm 62-72mm 77-72mm

All just £4.99 each!

This is just a tiny fraction of our range. Over 160 different sizes in stock, from 25mm to 105mm. Probably the largest selection in the UK!

MACRO PHOTOGRAPHY

Reversing Rings - £12.99

These fit to the camera body, between the camera and lens, leaving a screw thread to enable the reverse mounting of lenses. A way of obtaining a high reproduction ratio, allowing extreme Macro photography.

Canon: 52, 55, 58, 62, 67mm
Nikon: 52, 55, 58, 62, 67mm
Pentax K: 52, 55, 58, 62, 67mm
Olympus: 52, 55, 58, 62, 67mm
Sony: 52, 55, 58, 62, 67mm

Extension Tubes

Set of 3 tubes. They contain no optics, they simply move the lens further from the camera body, allowing closer focusing. Autofocus tubes available in Canon, Nikon and Sony fittings - manual tubes are also available in Pentax and Olympus fittings.

Manual Focus Tubes ~~£17.99~~
Autofocus Tubes ~~£134.99~~

Extension Bellows

Acting like an adjustable set of extension tubes, they allow fine control over focusing distance. Nikon, Canon and Pentax fit. ~~£49.99~~

Lowering the Cost of Photography

We are a small, family owned and run company, specialising in photographic consumables - and proud winners of the 2011 Good Service Award. We are located in Leamington Spa, in the heart of Warwickshire - if you are passing, please pop into our shop, and meet Cooper - our new office dog! To find out more about us (or Cooper) you can also find us on www.facebook.com/premierink

IMPROVED - Kata DPS Digital Rucksack The Kata DPS Digital Rucksack gives top level protection to two DSLRs with mounted lenses, 3-4 single lenses, a flash, as well as your personal items. The rucksack can be converted from a camera bag into a daypack when not shooting by removing the padded bottom camera insert. When used as a camera bag, the main compartment will hold your DSLR in a top grip position while the modular dividers system separates, organises and protects your lenses, flashes and other accessories. There is an included rain cover which folds neatly away, and an ergonomic chest belt and balancing waist strap for maximum comfort while transporting your gear. DR-465i £59.99 DR-466i £64.99 DR-467i £69.99

FLASH GUNS

Nissin

12 free Energizer batteries with every Nissin Flashgun

Nissin Di866 Speedlite The world's most powerful hotshoe flashgun! A guide number of 60m/ISO100 and a clear, full colour LCD panel, makes this advanced unit simple to use. Designed for use with Canon and Nikon digital SLRs, the Nissin Di866 fully supports Canon's E-TTL and Nikon's i-TTL functionality with the option for full manual overrides. Covering a range of focal lengths from 24-105mm and including a secondary fill in flash unit, the Nissin Di866 is the flashgun professionals have been waiting for. Includes built-in USB port for down-loading upgrades. £239.99 £199.99	
--	--

Nissin Di622 MkII Speedlite

TTL Flash Cord Coiled £24.99

TTL Flash Cord Straight £29.99 Available in Canon, Nikon, Sony, Olympus, Panasonic, Pentax and Samsung fit.	
---	--

FLASH DIFFUSERS

Bounce Flash Diffuser These popular, simple opaque plastic diffusers simply fit onto the front of your flash gun, creating a diffused bare bulb effect with even coverage. Huge range available for Canon, Nikon, Sony, Olympus, Pentax, Metz & Nissin. Below is just a sample of the range. Canon 270EX / 380EX / 420EX Canon 430EX / 430EXII / 550EX Canon 580EX / 580EXII Nikon SB600 / SB800 / SB900 Nikon SB24 / SB25 / SB26 / SB28 Sony HVL-F42AM / HVL-F58AM, Metz: 48AF1 / 58AF1 Nissin: Di466 / Di622 / Di866, Pentax: AF-540FGZ £10.99	
Inverted Dome Pro Flash Diffuser Set Comprising a clear vinyl body that simply slips onto the head of the flash gun, and an inverted frosted dome that clips onto the front. In addition to diffusing the flash directly hitting your subject, the inverted dome spreads light evenly through the sides of the clear vinyl body, lighting up the surrounding environment, thus producing a natural soft daylight effect. Especially useful for shooting interiors and portraits, and is a firm favourite with wedding photographers. Supplied with four domes, giving you a full range of natural, cool, or warm-up tones. Available in four sizes: Size 1: 62-65 x 39-42mm Nikon SB600, SB800, etc Size 2: 64-68 x 35-38mm Canon 420EX, 430EX, etc Size 3: 68-72 x 46-49mm Nikon SB26, 27, 28, etc Size 4: 73-77 x 46-49mm Canon 550EX, 580EX, etc £29.99	

FlashRight ColorRight's new 'super diffuser' for hotshoe flashguns. £89.99	ColorRight PRO The ultimate white balance filter! Available in two versions - Neutral and Portrait. £104.99

24-70mm f2.8 MKII

Due April
£2299

Nikon D800

- 36.3 effective megapixel, full-frame sensor.
- EXPEED 3 (14-bit A/D conversion) processor.
- Shoot 1080p HD video in FX & DX modes. You can now shoot broadcast quality video and record uncompressed movies to an external recorder.
- ISO Range 100-6,400 (extendable from 50 – 25,600).
- 30 to 1/8000 sec. plus bulb shutter speeds.
- Multi-CAM 3500FX; TTL phase-detection AF.
- AF-S, AF-C, focus tracking, face detection, single point selection, AF support in live view; manual focus with electronic rangefinder focus modes.
- 86,400-pixel RGB sensor metering.
- 3D Colour matrix metering, centre-weighted and spot metering (approx. 1.5%).
- Advanced active D Lighting.
- Manual pop-up flash; GN 12 (ISO 100, m); iTTL flash control; 24mm field of view coverage.
- Twin card slots - one Compact Flash and one SD.

Part Exchange Welcome

D800 Body £2399 - D800E without low pass filter Body £2689

Nikon D4

- 16.2 effective megapixel, full-frame sensor (16.6MP total).
- 10fps shooting with AF and AE, 11fps with focus and exposure locked, 24fps 2.5MP grabs.
- 91,000 pixel sensor for metering, white balance, flash exposure, face detection and active d-lighting.
- ISO Range 100-12,800 (extendable from 50 – 204,800).
- MultiCAM 3500FX Autofocus sensor works in lower light and with smaller apertures.
- Two sub-selector joystick/buttons for shooting orientation.
- 1080p 30 HD video at up to 24Mbps with uncompressed video output.
- New EN-EL18 battery (21.6Wh capacity, CIPA-rated at 2600 shots).
- Twin card slots - one Compact Flash and one XQD.

D4 Body
£4799

NISSIN Di622 II

Many photographers think of using a flash only at night or in poor lighting. However, a flash can be very useful in daylight too. Eliminate the shade under trees. Use fill-in lighting to sharpen the subject. Address catchlight in the eyes, and stop motion. Emphasize the lighting contrast.

rrp £149.99

HASSELBLAD XPAN II with 45mm f4
lens. Body is in great condition, little
paint loss around the edges and corners
which is very common with this model,
shutter count shows 270 - very low use.
Lens - perfect condition. Hoya UV filter
attached to front of lens. Boxed with all
original paperwork, spirit level, lens
hood, and strap. Good examples of this
camera are extremely rare, so this will
be a good investment. £1700. tel: 01470

ROGER HICKS

Are wedding photographs really important and is it worth spending lots of money on hiring someone to take them?

HERE is a saccharine and blatantly dishonest line of argument, puffing up the importance of wedding photography and encouraging the intellectually challenged to spend more than they can afford: 'When the wedding dress has been put away, and the food has all been eaten, and the guests have all gone home, and the flowers have wilted and died, all you have left is the photographs...'

If that's all you've got left, you should contemplate immediate divorce. In fact, you shouldn't have got married in the first place.

This is because, first and foremost, you have each other. Even if you're bitterly realistic and recognise that some marriages end in divorce, you hope (and with any luck believe) that yours won't. Getting married is a declaration of your love for each other, and a hope that you will be together forever. It is not a photo opportunity.

Another thing you will have, along with each other, is your memories. Yes, photographs can be a valuable *aide-memoire*. You can look at them years or decades later and think, 'Gosh, weren't we young,' and 'Gosh, we've been lucky'. But quite honestly, even just a snapshot will suffice to spark reminiscences. You don't need a big padded album full of top-flight professional photographs. In fact, I'll address a little challenge to my married male readers. Do you know exactly where your wedding pictures are? I know I don't. Your wife almost certainly does, but that's because women are usually better at knowing where everything is, from last year's electricity bills to the packet of hacksaw blades you bought yesterday and must have put down somewhere when you came in.

Before this prompts too much hate mail from wedding photographers, I'll add that I think it's a good idea to hire the best wedding photographer you can afford. If you don't, you may find there were moments you really wished had been photographed, but which somehow eluded all the photographers who were there. I'm assuming, of course, that as a photographer, you have quite a lot of friends who are also photographers.

The key phrase in the paragraph above is, however, 'the best wedding photographer you can afford'. If you

can afford £10,000 just for the wedding photography, which is what one of my friends has been known to charge, then the best of luck to you. Likewise, the best of luck to any wedding photographer who can get £10,000 for shooting a wedding, although a fee that big will include a number of ancillaries.

'The best wedding photographer you can afford' also assumes that you actually care about wedding pictures. Some people don't. If, with the wedding in prospect, one of you cares and the other doesn't, it's

probably as well to defer to the one who does. But if you discuss it, you might find that neither of you really cares, in which case, why not save the money or at least buy a cheaper package? You may even have a reliable, trustworthy and competent friend who actually *wants* to photograph the wedding.

Actually, if they are reliable, trustworthy and competent, they'll probably try to persuade you to hire a wedding photographer,

because shooting weddings is hard work, nerve-racking and expensive. I've shot five weddings in 40 years or so. The first two were because my friends were too young and too broke to afford 'real' wedding photographers. The second two were because they were very old and very dear friends, and insisted. The fifth was the daughter of my oldest friend. All five were shot as wedding presents, without even charging expenses, which in film days could amount to hundreds of pounds. All five were successes.

Now, whereas in this column I'll often start with something apparently non-photographic and move on to link it to photography, this time I'm going to reverse it. Weddings are just one aspect of how our rituals have failed to keep up with reality. If you are desperately poor, then indeed, yes, your wedding may well be the greatest day of your life. With the exception of that one day, your life may consist of little but unremitting, unrecorded and probably back-breaking toil. But in a society where leisure and holidays, and possibly even foreign holidays, are taken for granted, it would be rather sad if you could never look forward to even better days together than your wedding day – and to pictures of those days. **AP**

'Do you know exactly where your wedding pictures are? I know I don't. Your wife almost certainly does, but that's because women are usually better at knowing where everything is'

Roger Hicks is a much published author on photography. He has written more than three dozen books on the subject, many in partnership with his wife Frances Schultz. He has been a freelance photographer/writer since 1981, contributing to many magazines. Visit his website at www.rogerandfrances.com
